## Getting Started

Welcome to the DRAGONLOCK: Ultimate™ terrain system. This instruction manual will outline some basic materials you will need for 3D printing these models, specific printing information for the models in this set, and links to additional resources.

For more information on getting started with 3D printing, help with choosing a printer, settings for many popular printers, troubleshooting, and more; please visit our 3D Printer forums:

<http://fatdragongames.proboards.com/board/21/3d-printing-dragonlock-terrain>

For painting tutorials on these and other models in the DRAGONLOCK: Ultimate™ product line, please visit our Youtube channel:

## Basic Tools and Materials

For gluing models with multiple pieces together, we have found that Gorilla Glue works great (especially the 'gel' type.)

While not necessary, it helps to have a pair of small tweezers on hand. You'll find yourself using them often to pull odd strands of plastic off the model, getting small bits of plastic out of the printer, etc.

# DRAGONLOCK

Absolutely essential is a small metal spatula to help remove models from your build plate. We've found that ones like this from art supply aisles at craft stores work great and should only cost you a few dollars.

When printing PLA on a non-heated build plate, applying blue painter tape to your build-plate works great to help the plastic adhere.

To make your print stick as well as possible, you can wipe off newly applied tape with a paper towel that has a little rubbing alcohol on it (the tape has a wax coating on the back that sometimes inhibits the plastic from properly sticking to it).

## General printing tips for DRAGONLOCK: Ultimate™ models

With the wide variety of printers and filaments on the market, it isn't possible for us to list printer settings that will work with multiple machines. Please visit the Fat Dragon Games forums for printer-specific tips and information:

<http://fatdragongames.proboards.com/board/21/3d-printing-dragonlock-terrain>

## Using the DRAGONBITE™ clips

Before inserting a Dragonbite™ clip, you must first remove the printing support present in each slot on all four sides of every model. We recommend using needle-nose pliers to gently twist the support out of place (always wear eye protection when using tools.) Clips should be printed with 15-20% infill (but can be printed with 0%.)

To connect DRAGONLOCK™ Ultimate models together, simply insert a Dragonbite™ clip into the slot of one model, then slide the adjoining model into the opposite side. In addition to the standard v3.0 clip, there is an optional clip (the previous 2.0 version) that is slightly looser, should you need it. Unused slots can be covered with Dragonlock™ edge pieces.

Alarm Bell

Fence

Sign

Lamp Post

Archery Target

Hitching Post

Belfry

Boarded Up Window

Fieldstone Wall

## Printing info:

### Filament:

- We recommend using PLA (we use eSun PLA Pro and Hatchbox PLA in the FDG office)

### Layer Height:

- All models .1 to .2 layer height

### Top/Bottom layers:

- 6 layers for .2 layer height, 9 for .1 layer height

### Infill:

- 10% all models

### Rafts:

- None

### Brim:

- None

# DRAGONLOCK

Cut out the sign, leaving plenty of white space around it.

Pre-fold the sign before gluing, making sure you fold precisely on the dotted line. Once you have the fold correct, then apply a very thin layer of paper glue and let dry completely before proceeding.

Once fully dry, cut away the white excess. The white edges can be colored in with a brown or gray marker.

Slide the sign in the slot along the bottom edge of the sign holder.
