

Gondor - Minas Tirith - Main Gate Building Instructions

Prepare everything you need

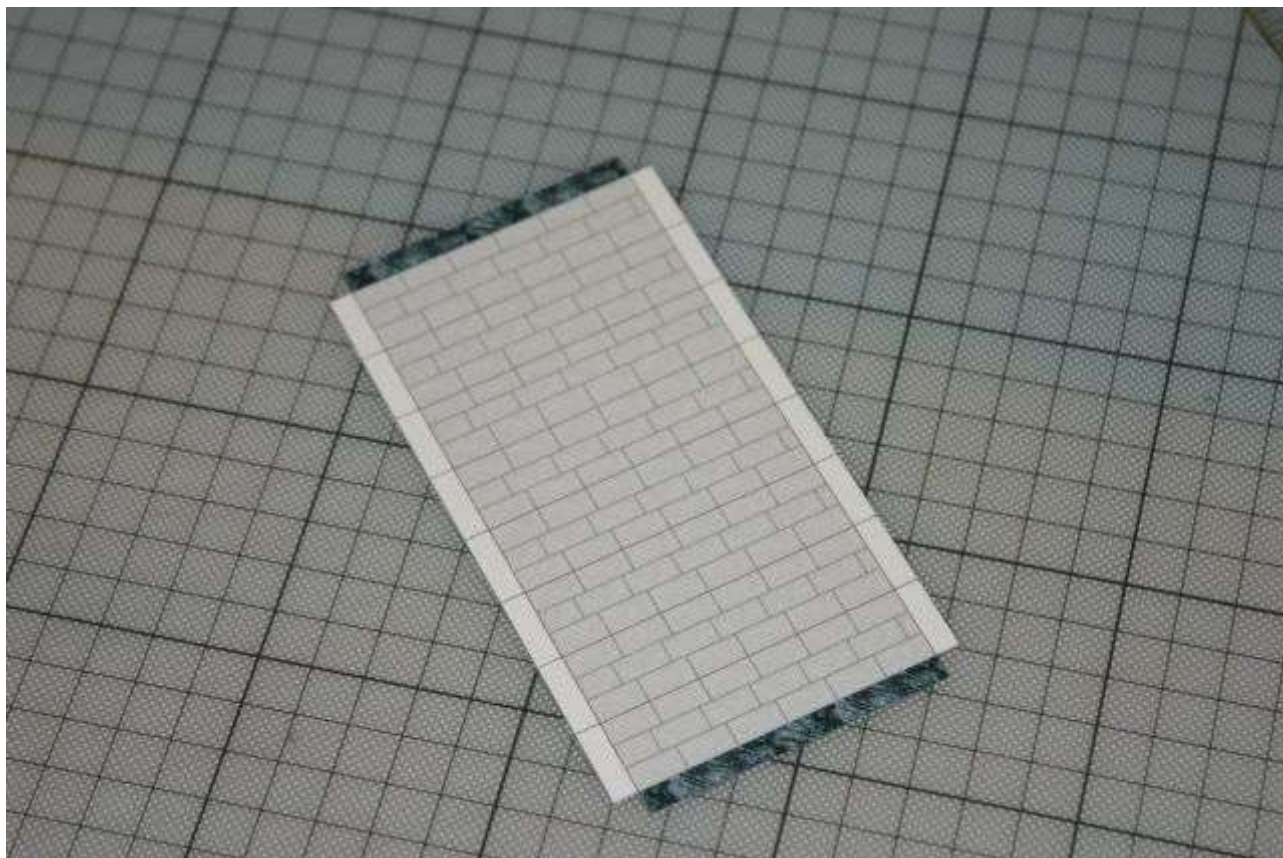

Basically you need the printed templates, a ruler, a sharp knife or scissors and glue. In general I use fluid glue and a „smear stick“ for larger areas.

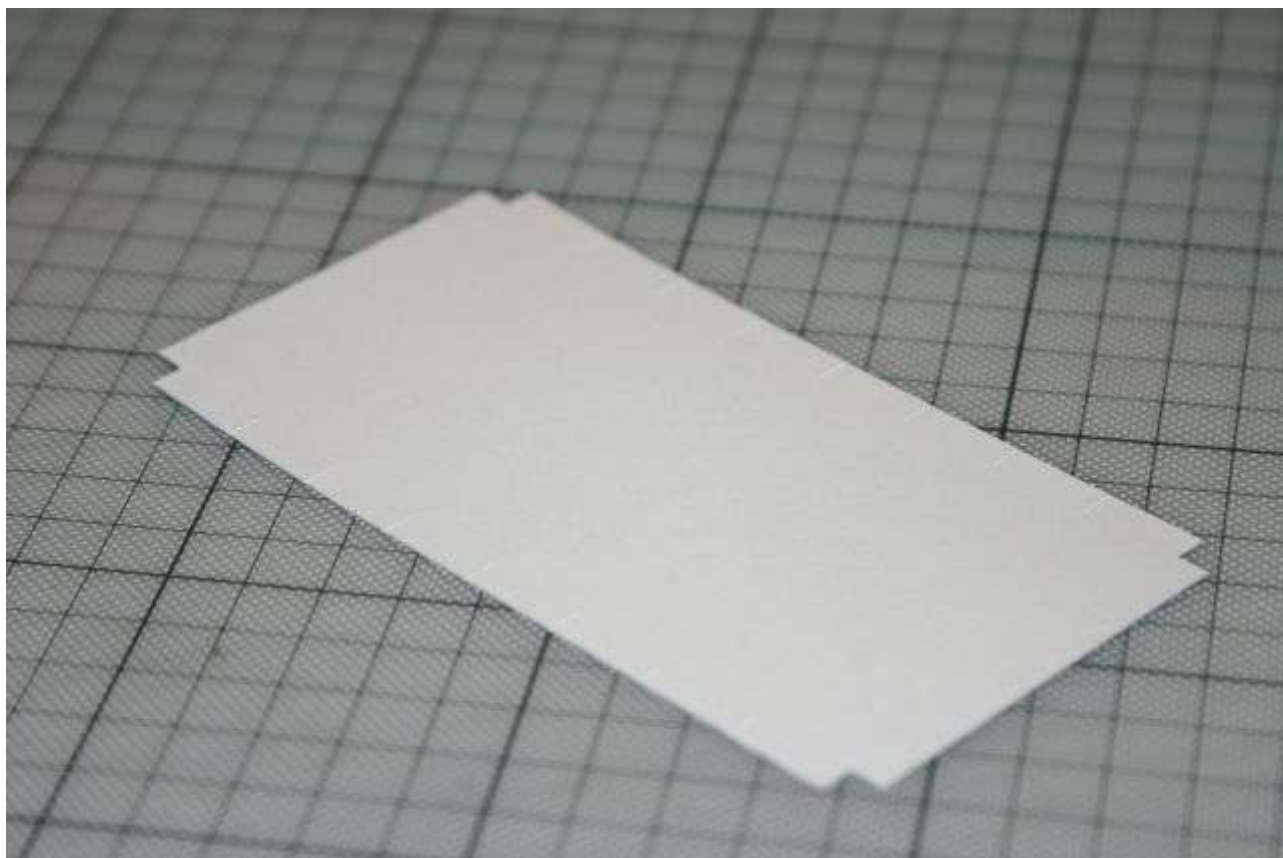

Cut out the front and back wall section

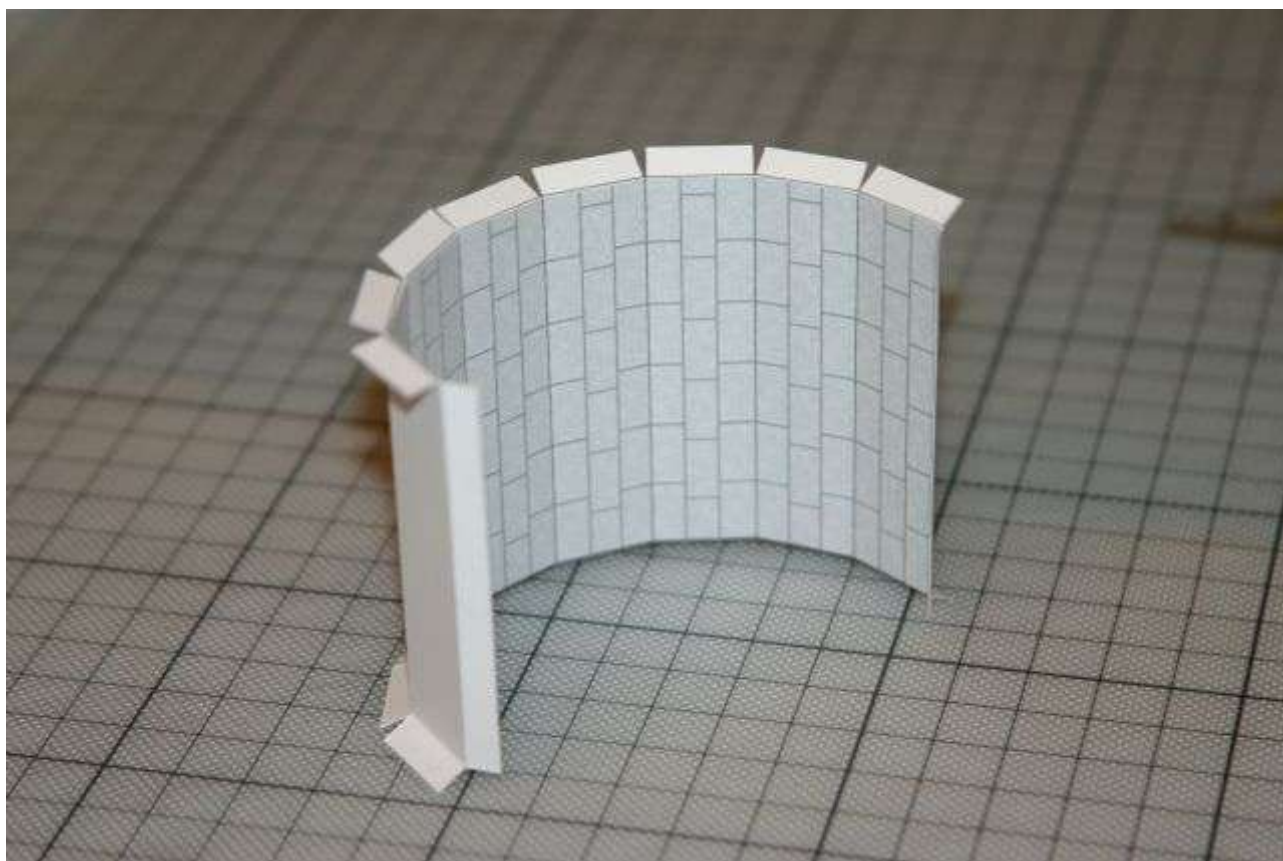

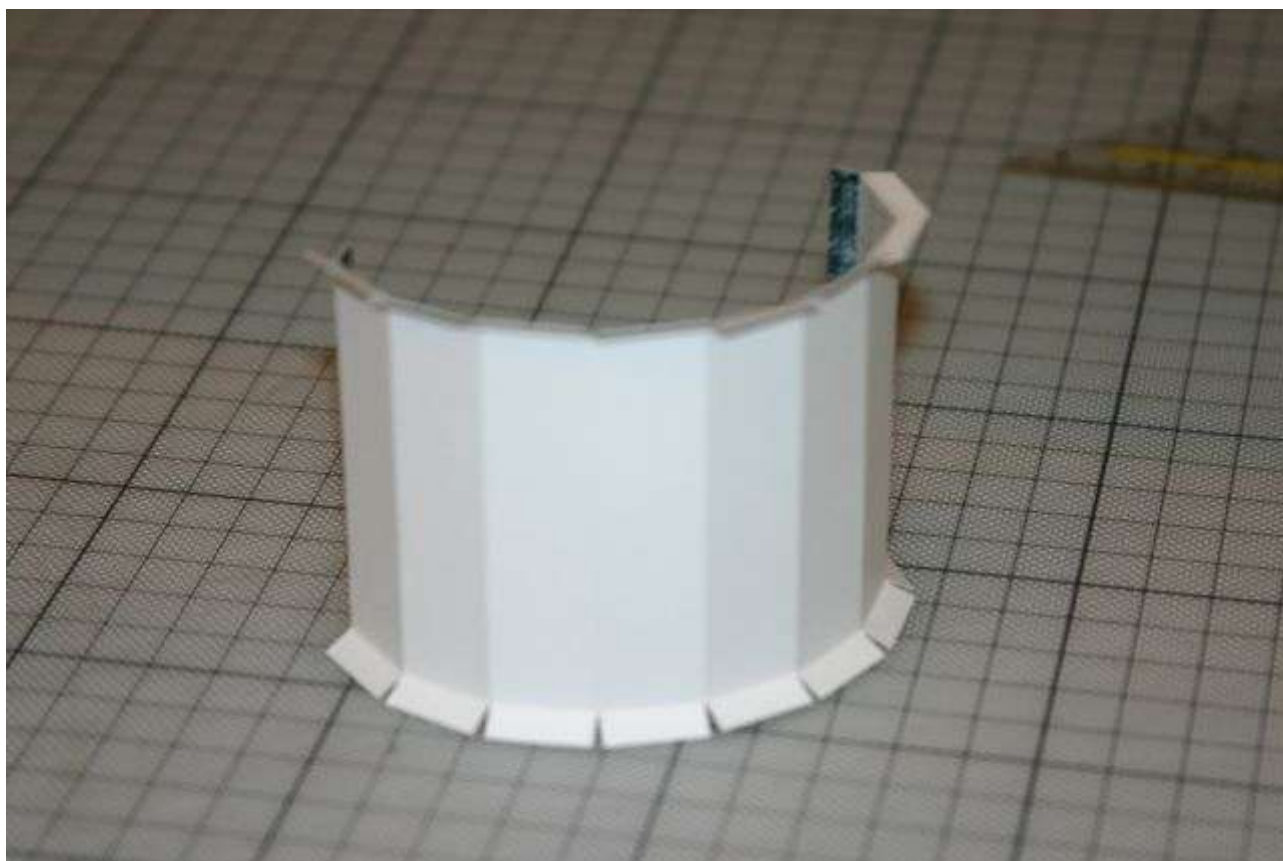

Cut out the Gateway arched wall section

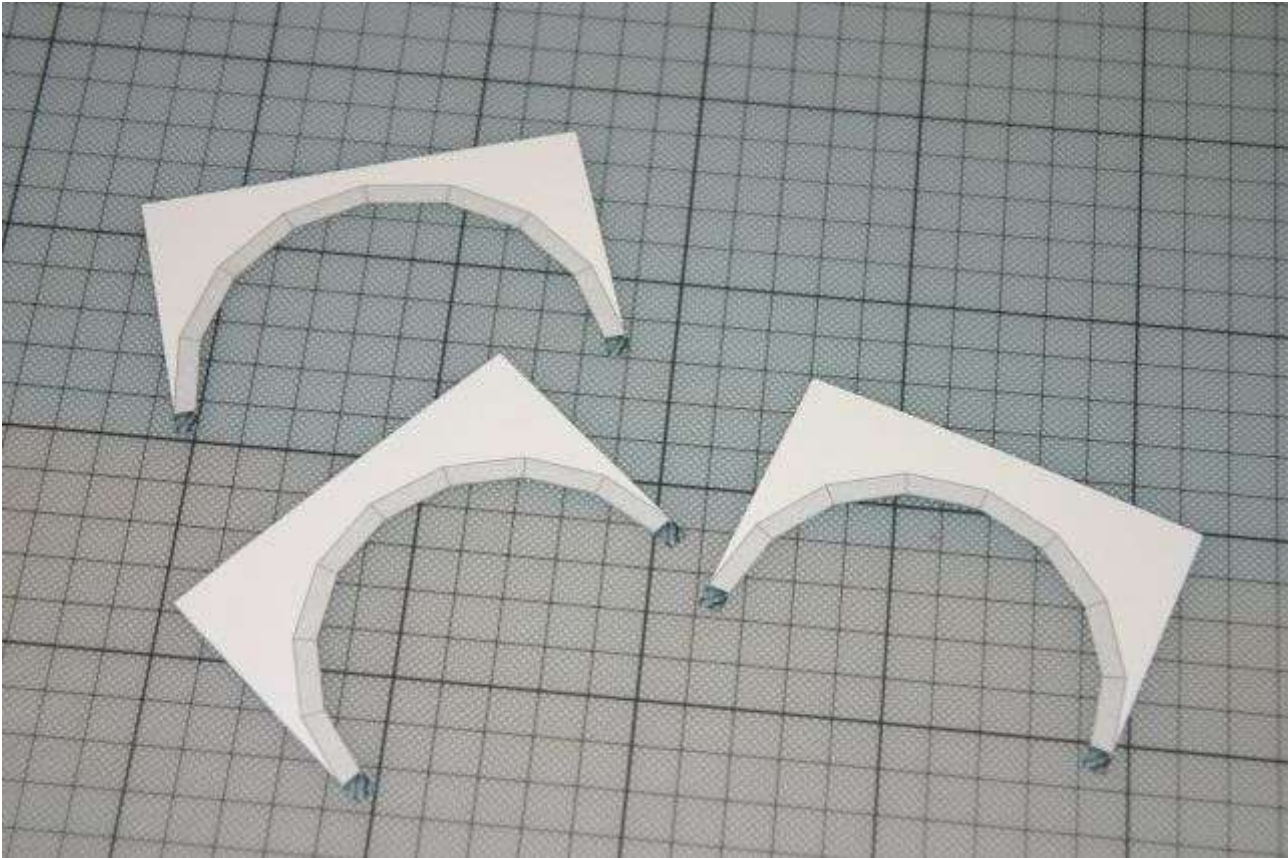

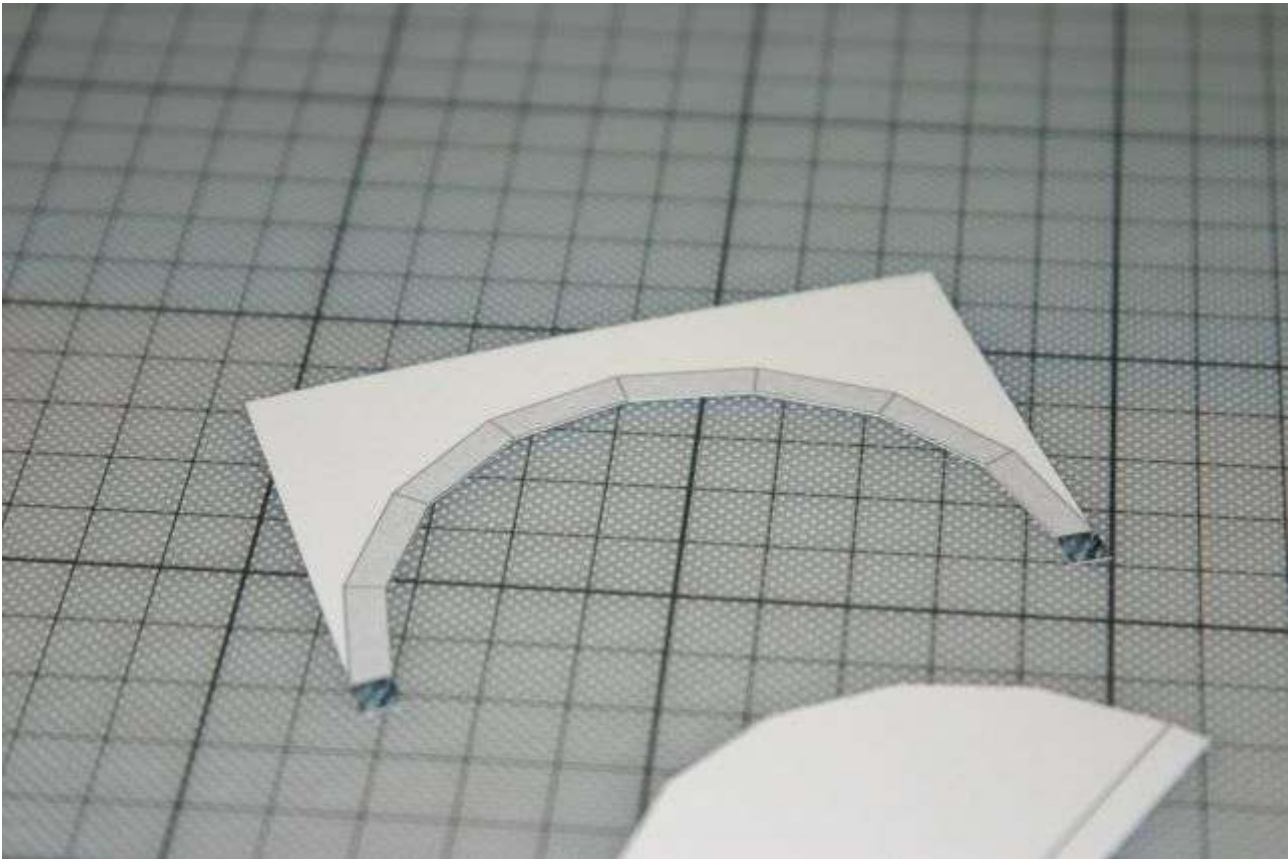

Cut in on the flaps on the side and turn around.

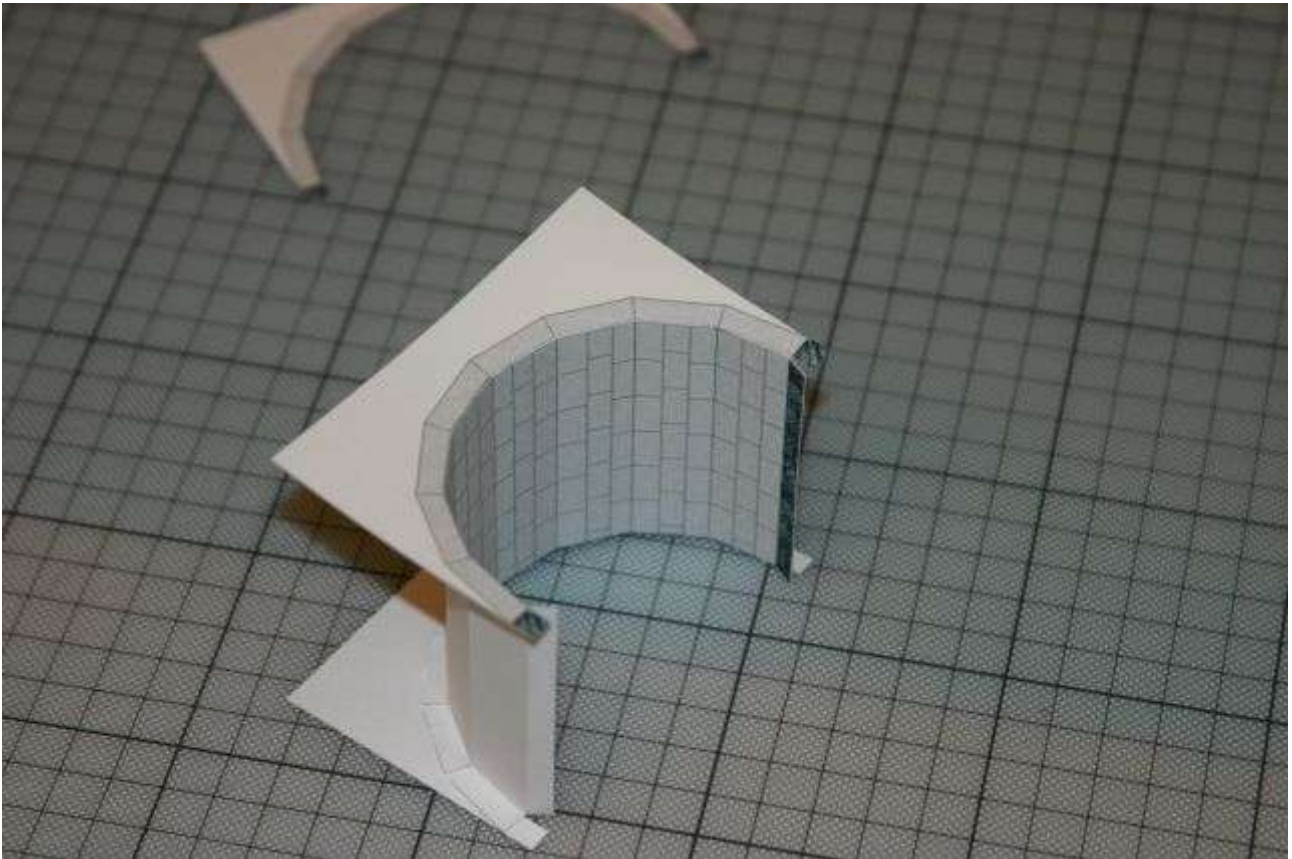

Now score the line between each cut line on the back in order to bend the piece like this.

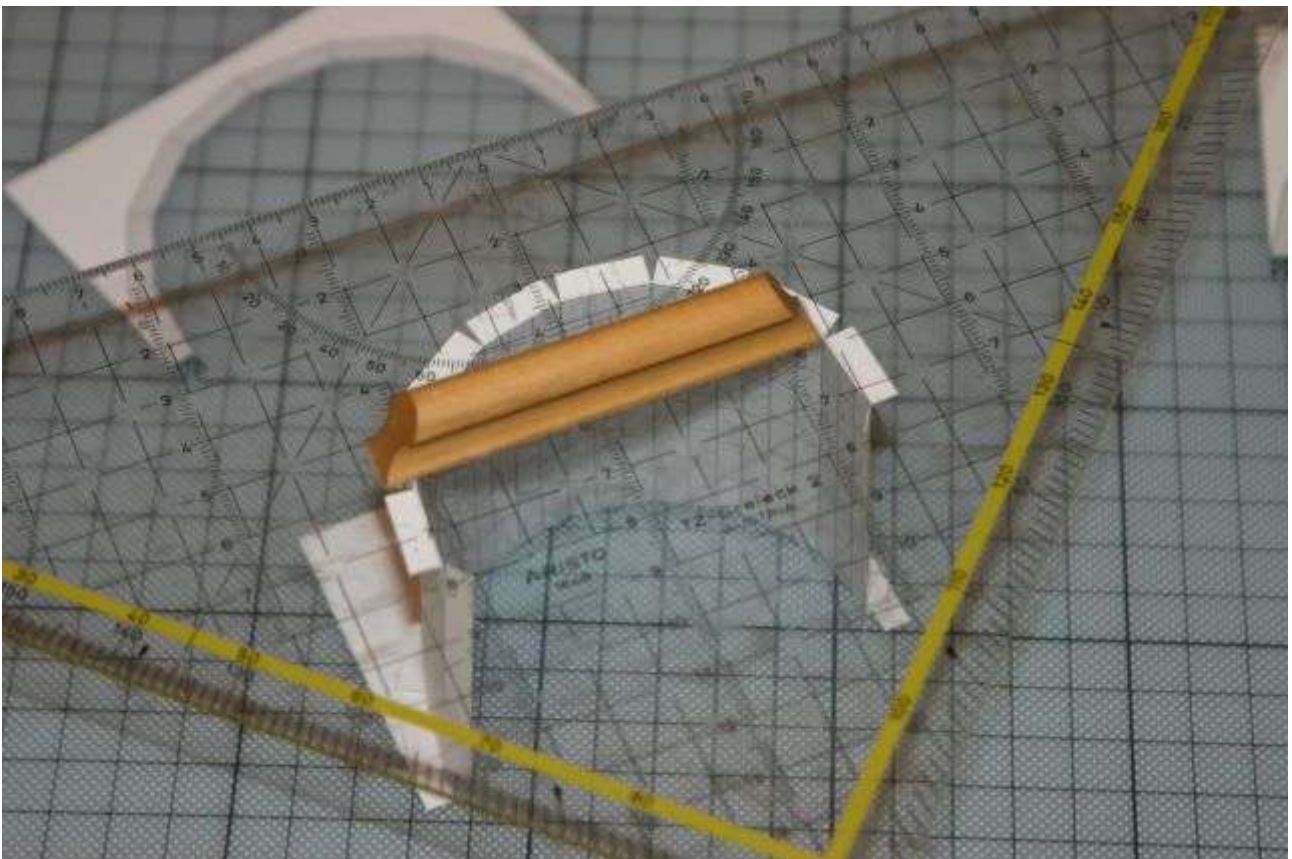

Cut out the head of the arcs sections.

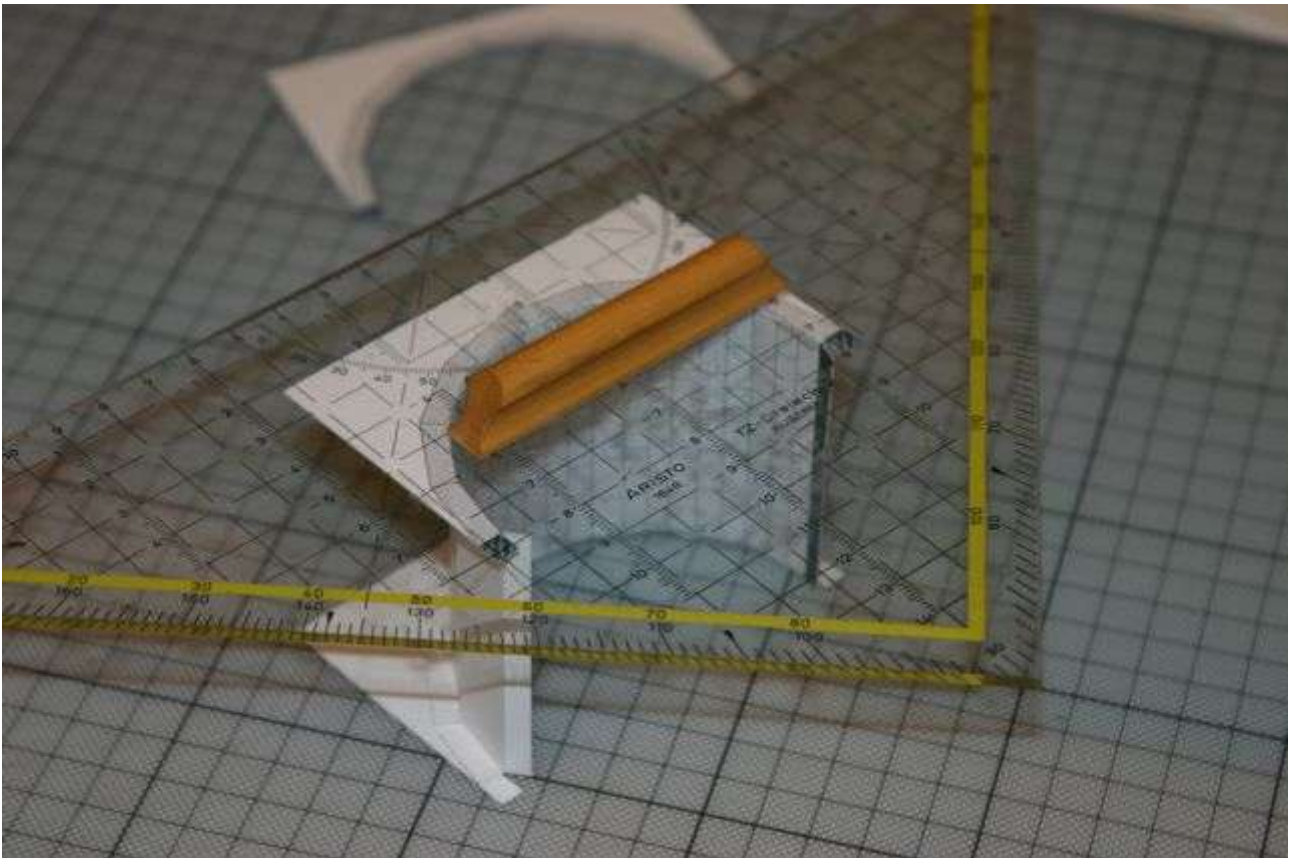

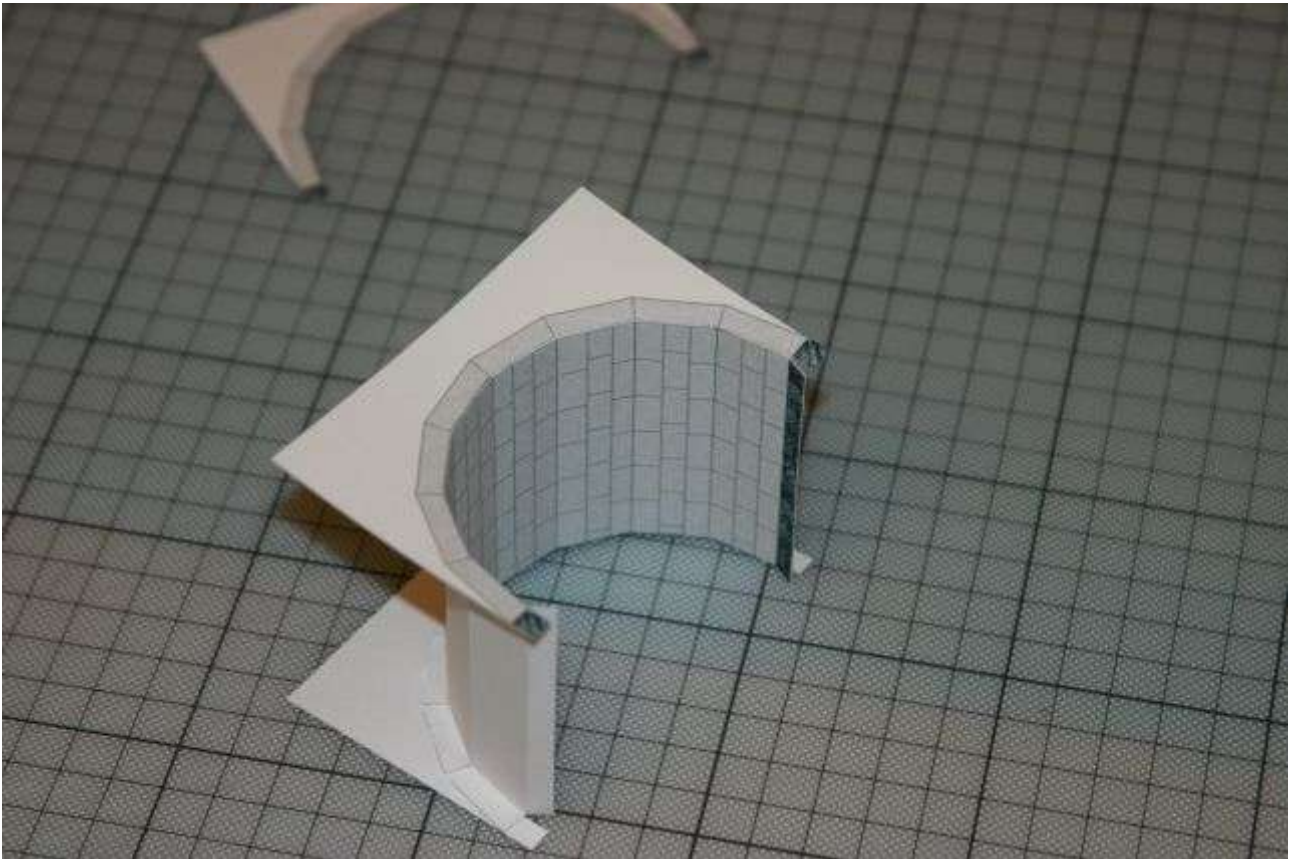

Glue the arc head to arc wall.

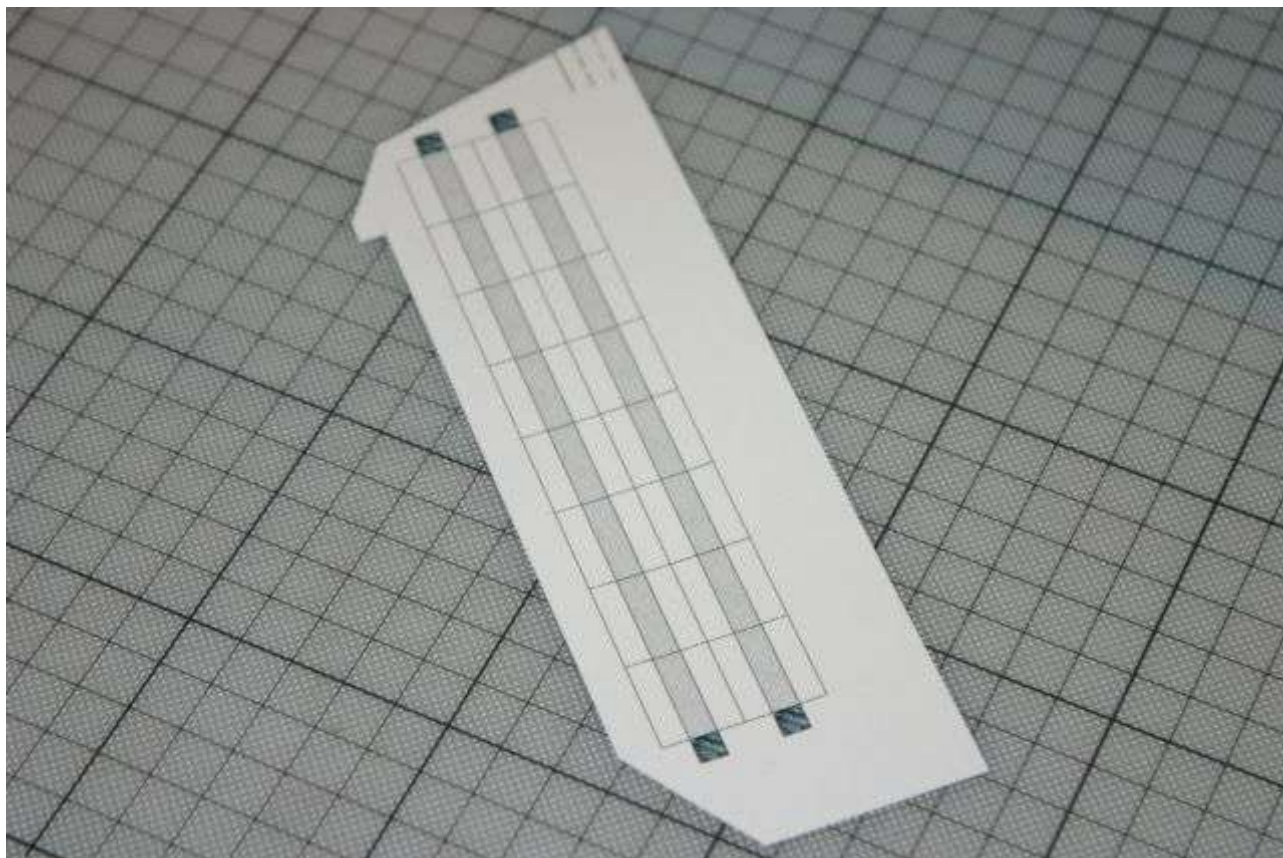

I use the ruler to put pressure while drying of the glue.

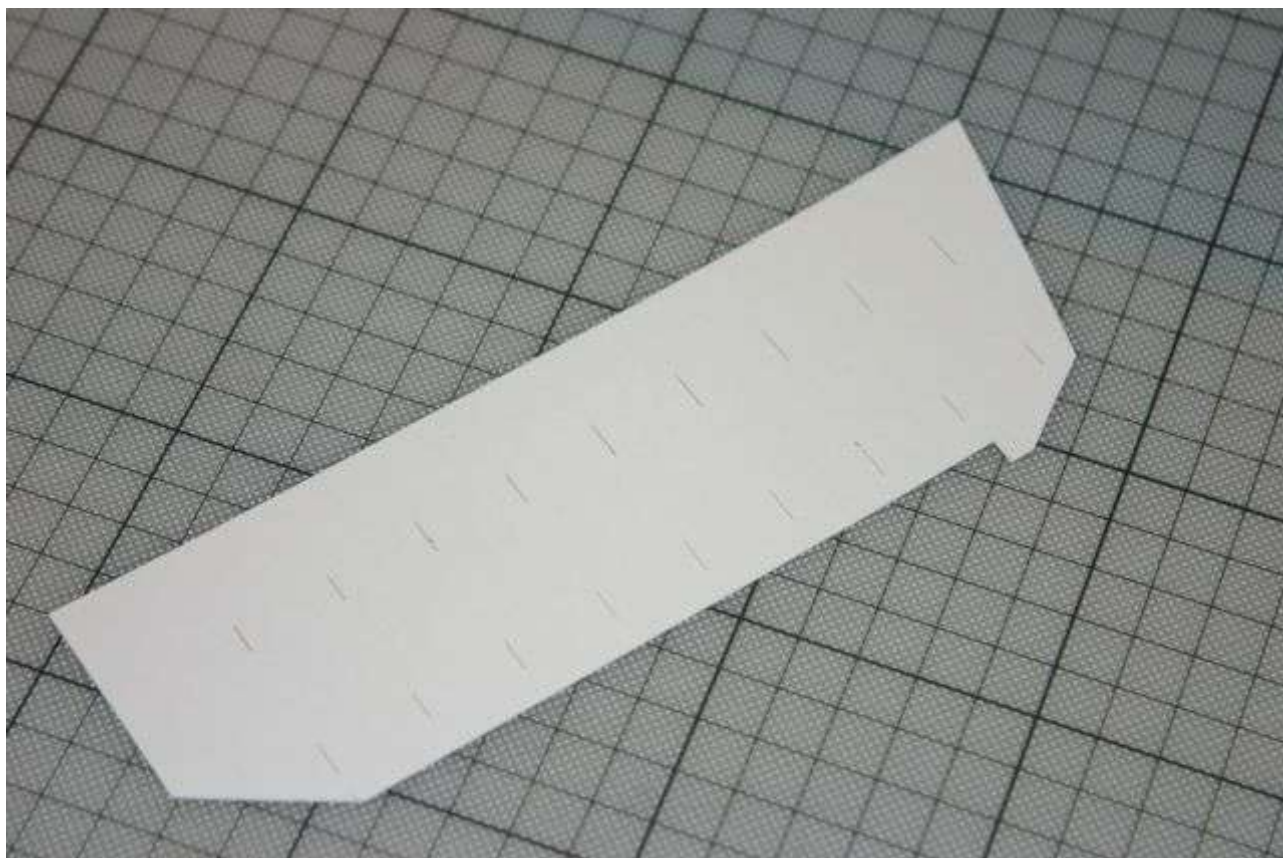

Do the same for the other side.

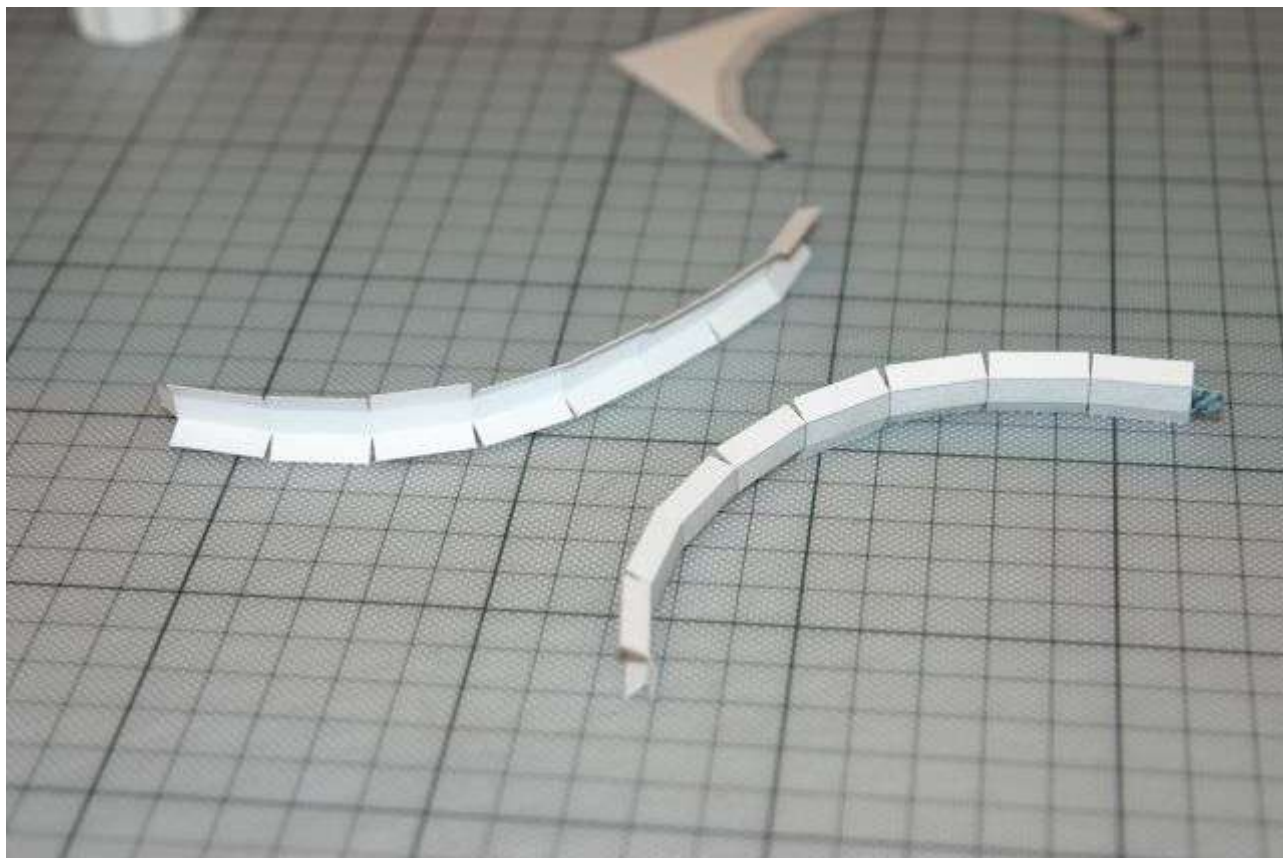

Cut out the short arc wall sections

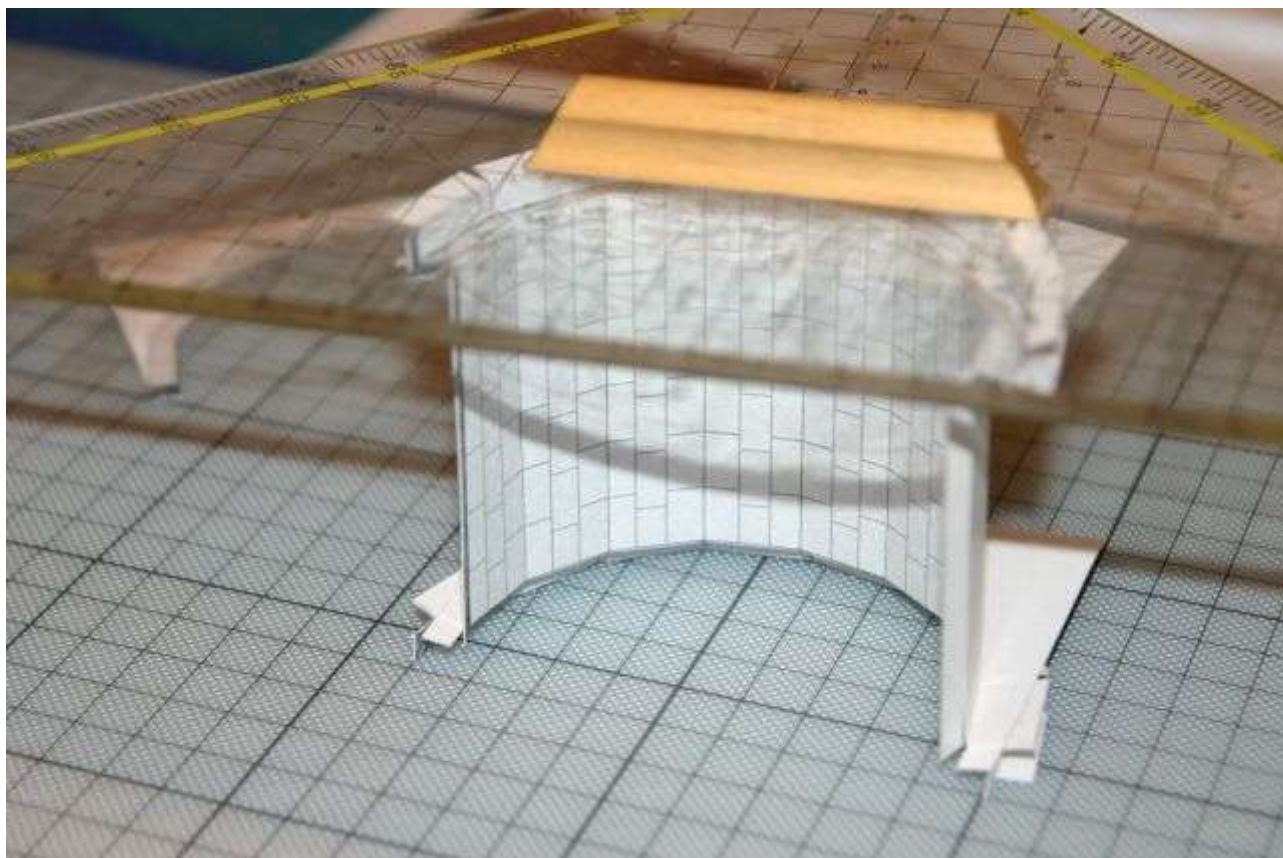

Again cut the flap sides and turn to score the connecting lines between.

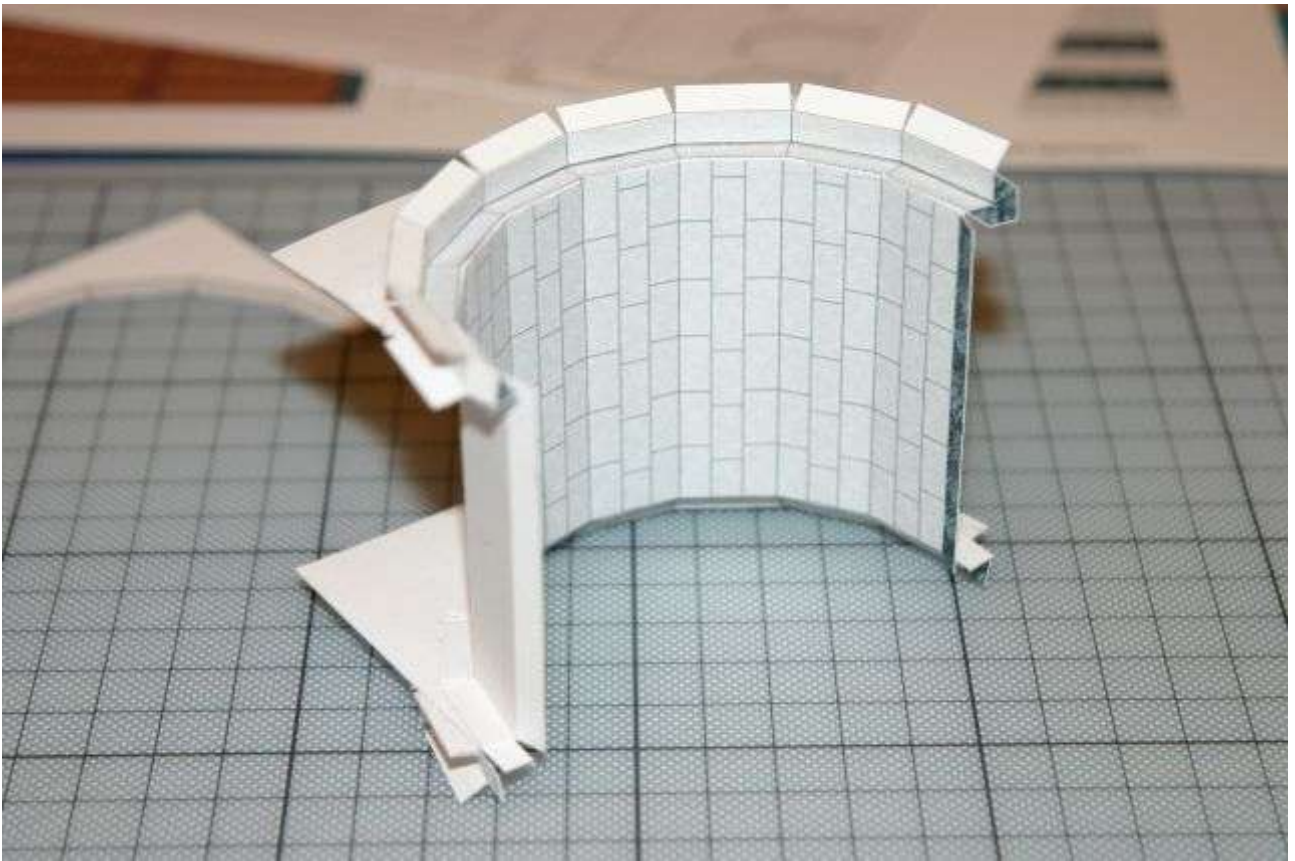

The result should look like this.

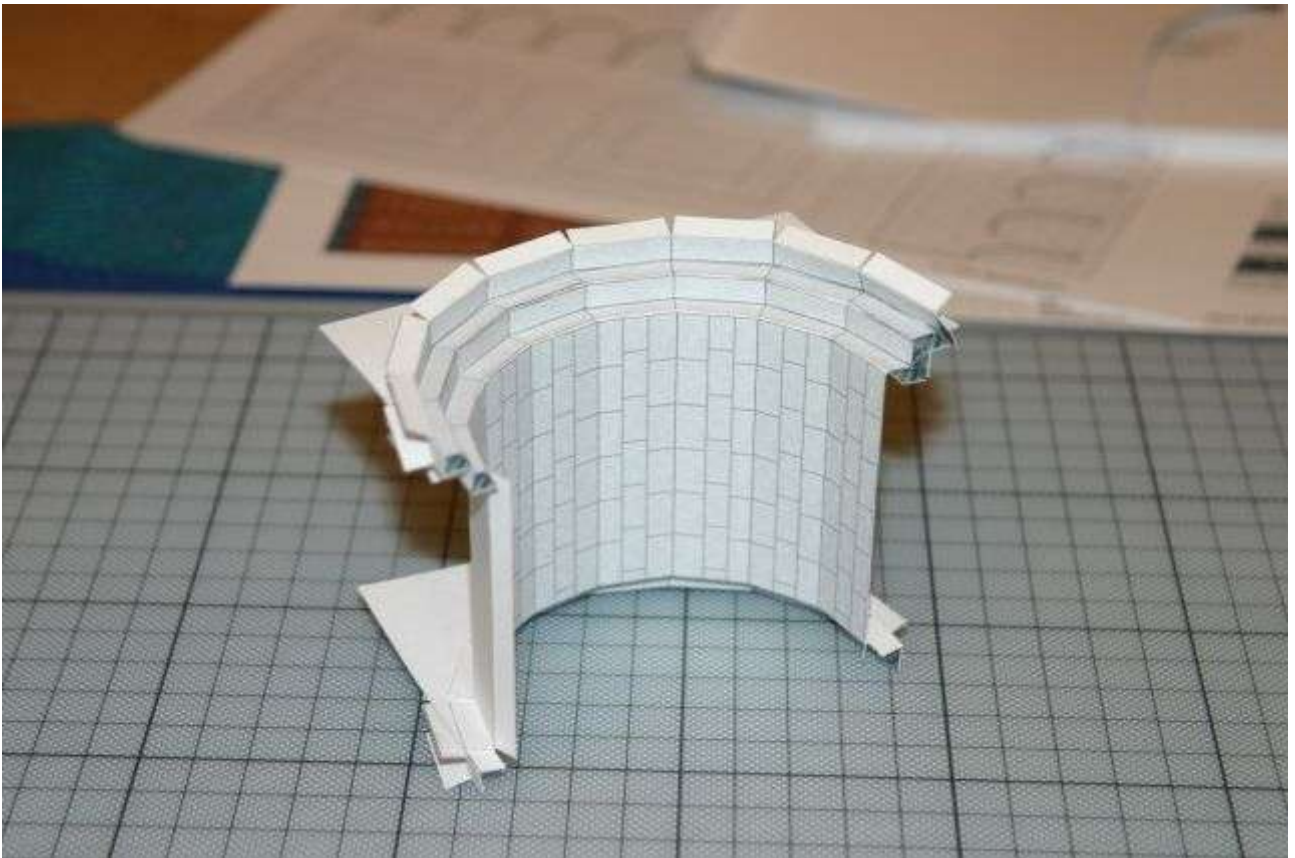

Glue these to the front and back.

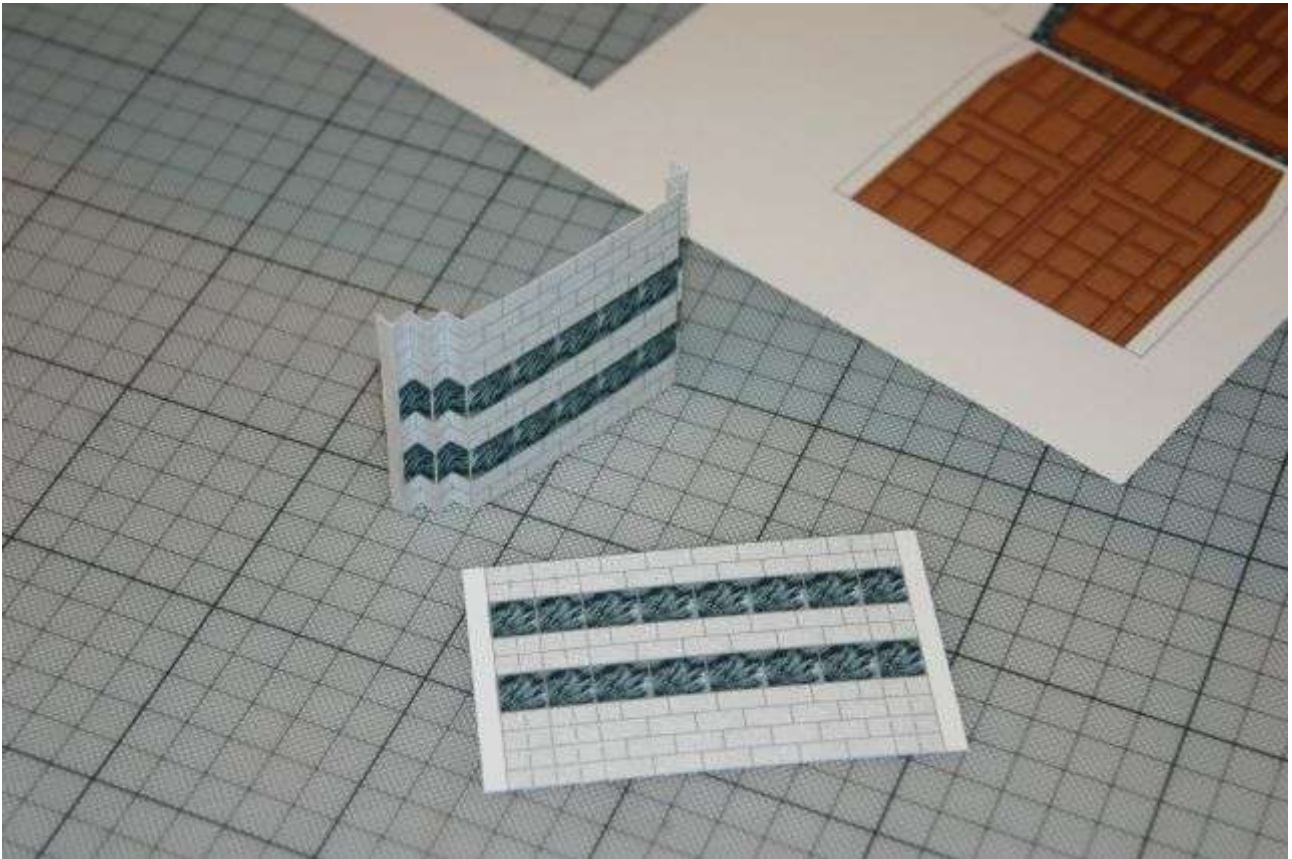

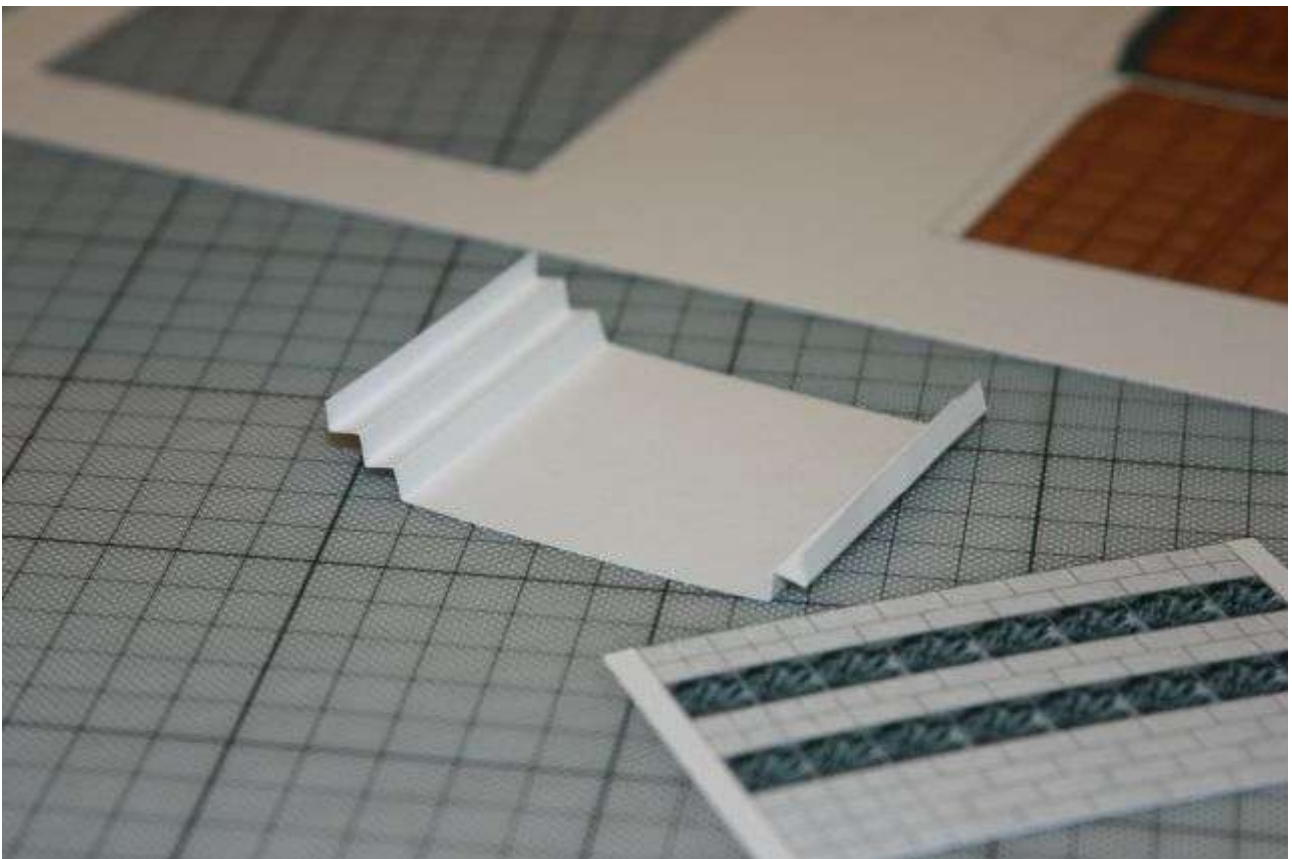

Repeat for with the thin large arc wall section on one side.

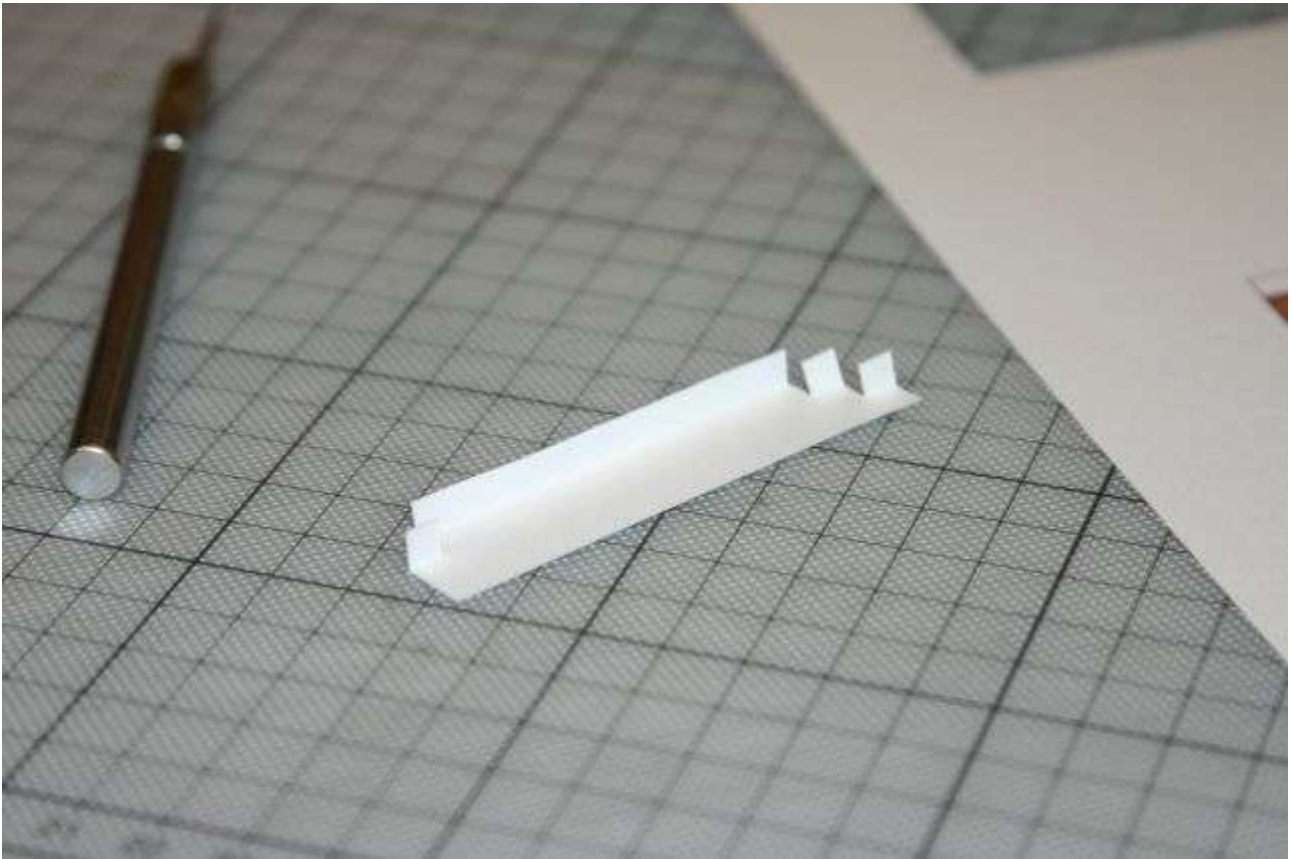

Cut out and score the side walls of the arc way.

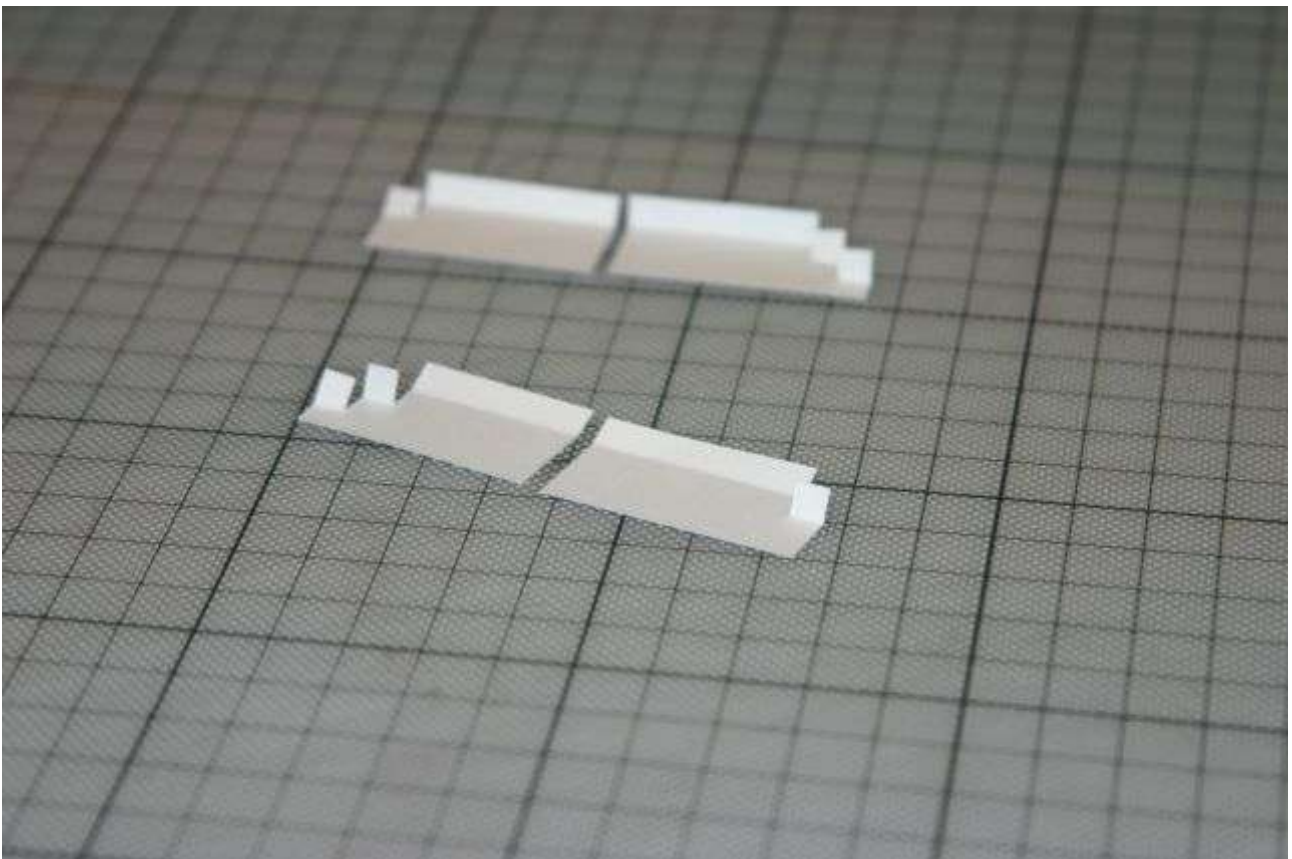

They should look like this (the side with the two darker lines is the bottom).

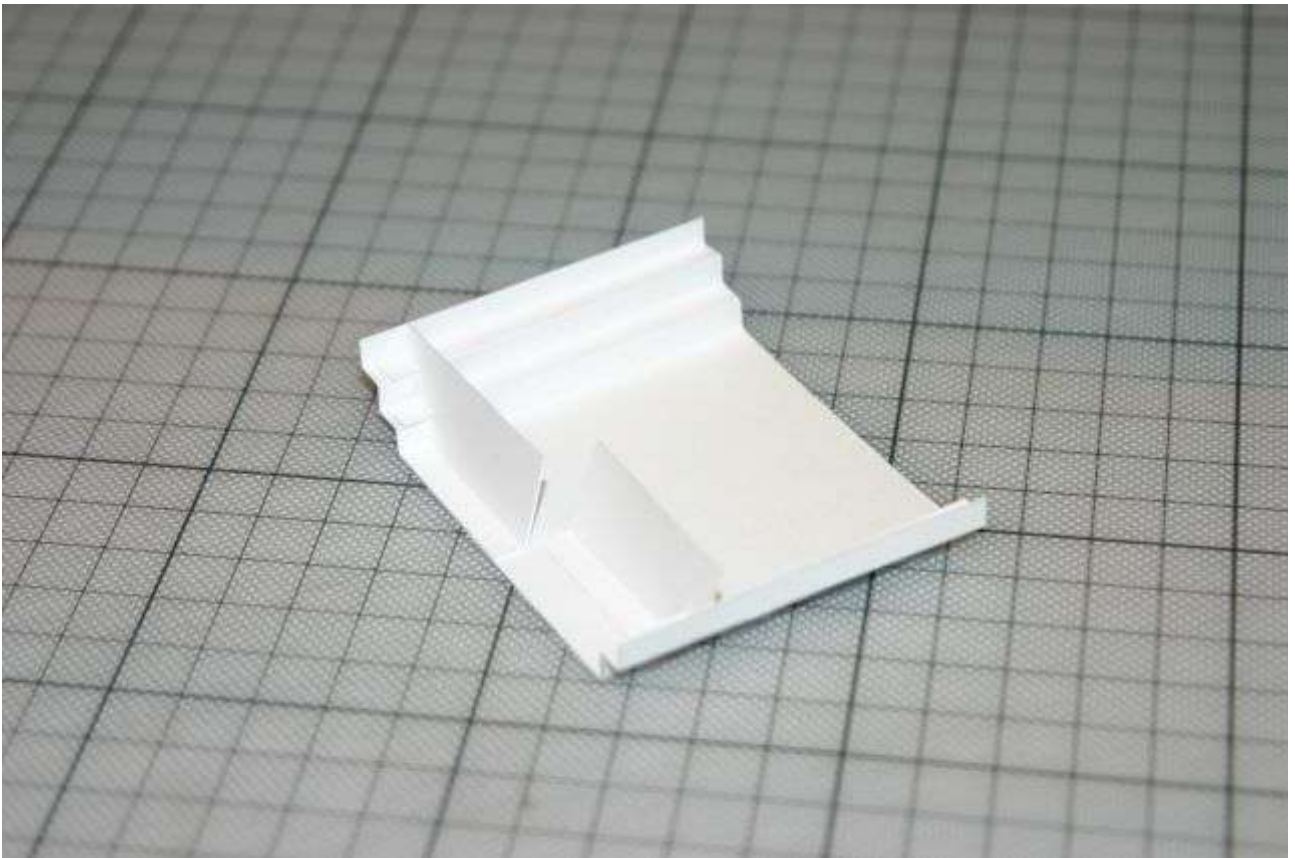

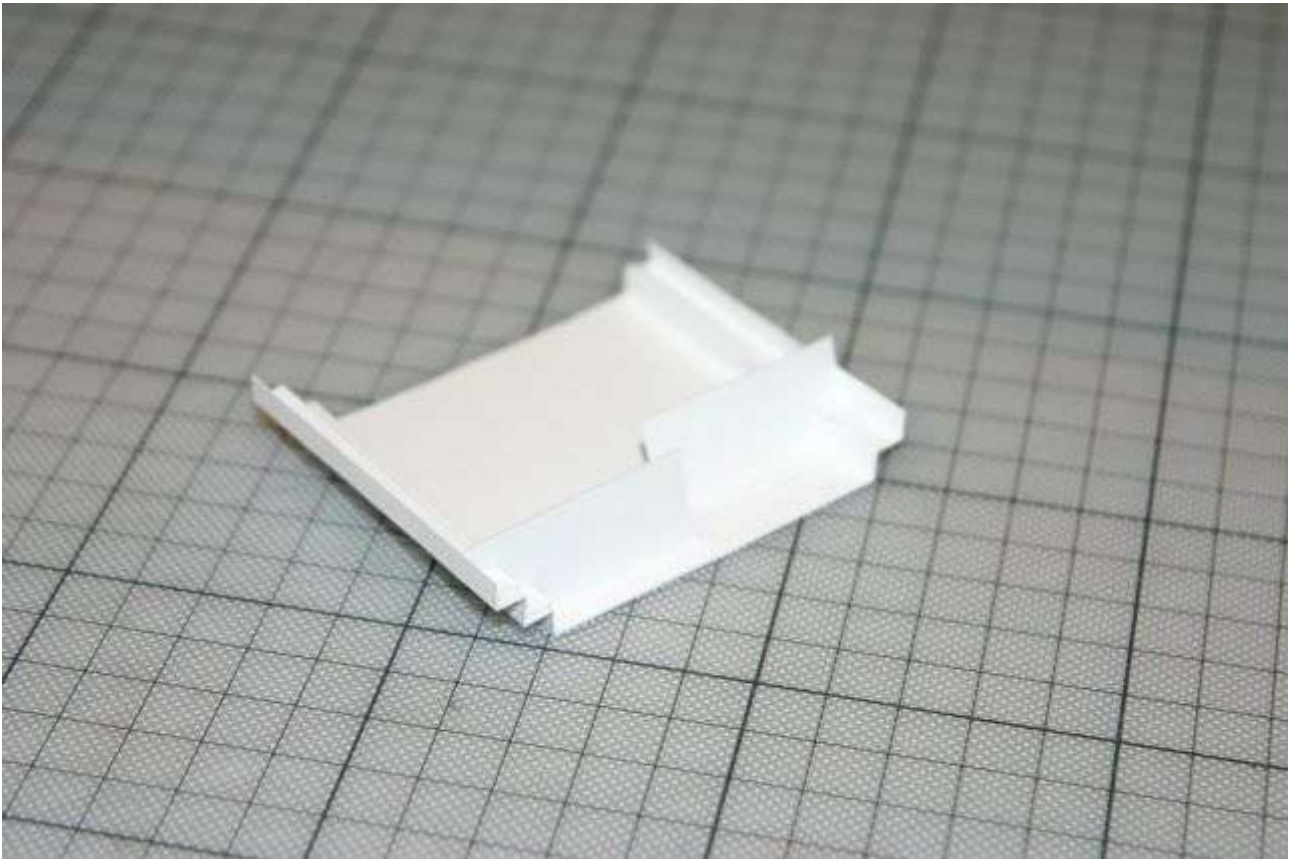

Next cut out and score the stabilizers for the wall sections.

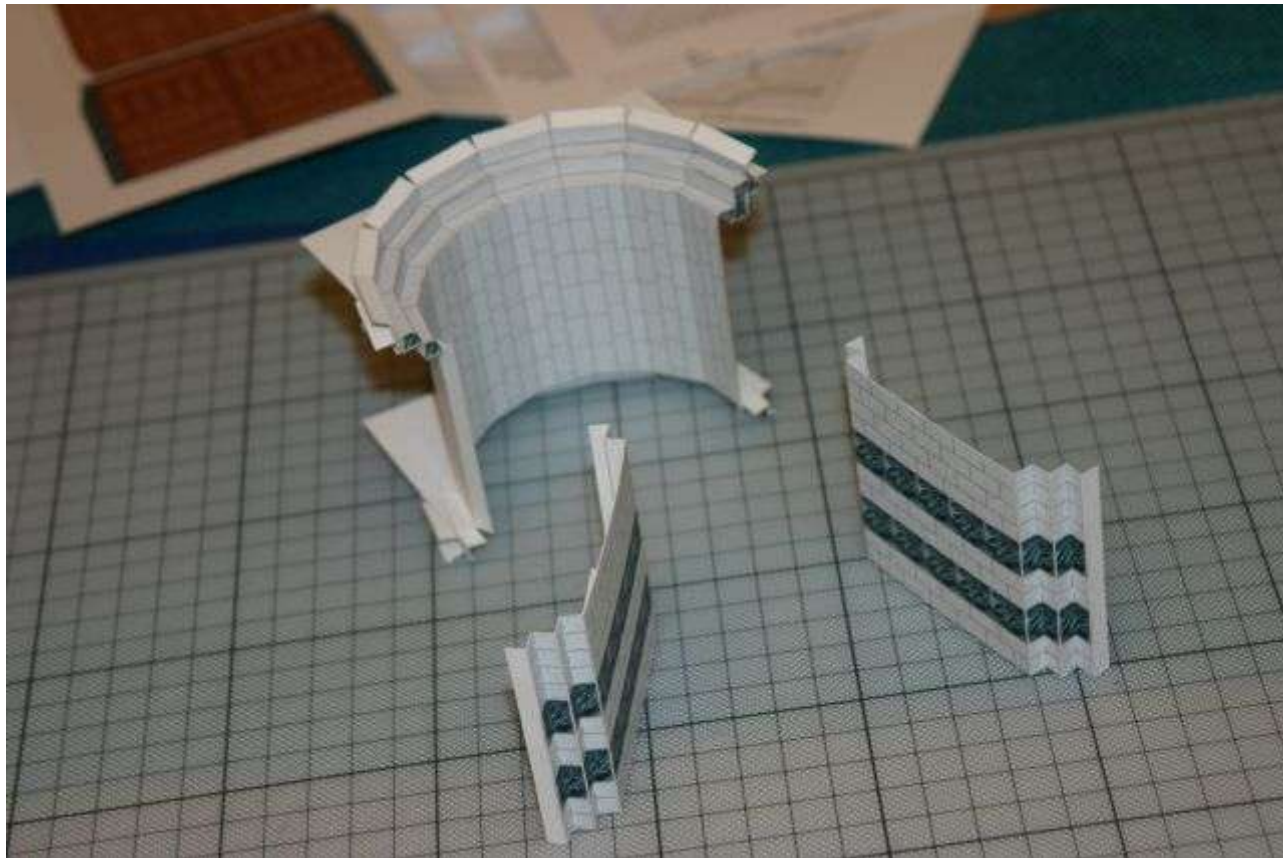

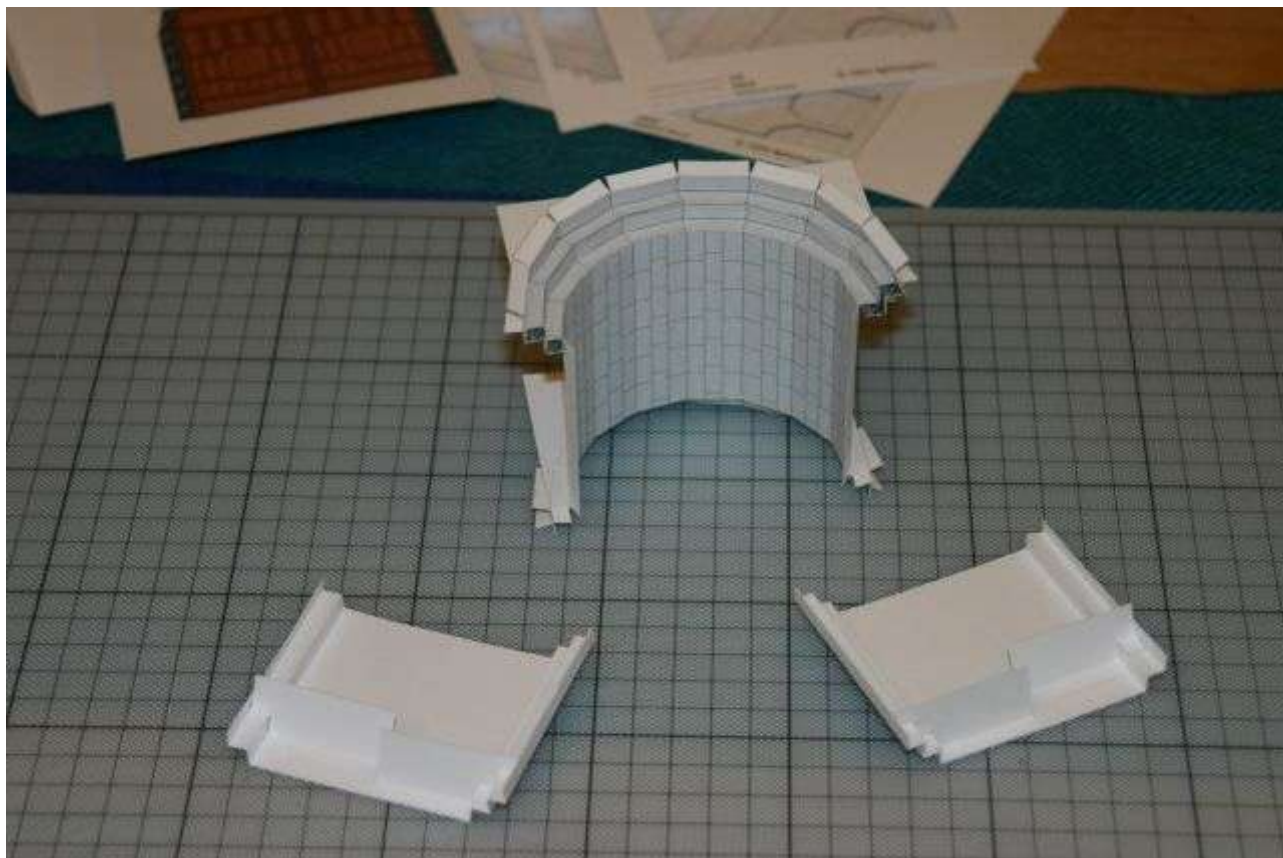

Cut them in half.

Glue them onto the walls to give a stable form.

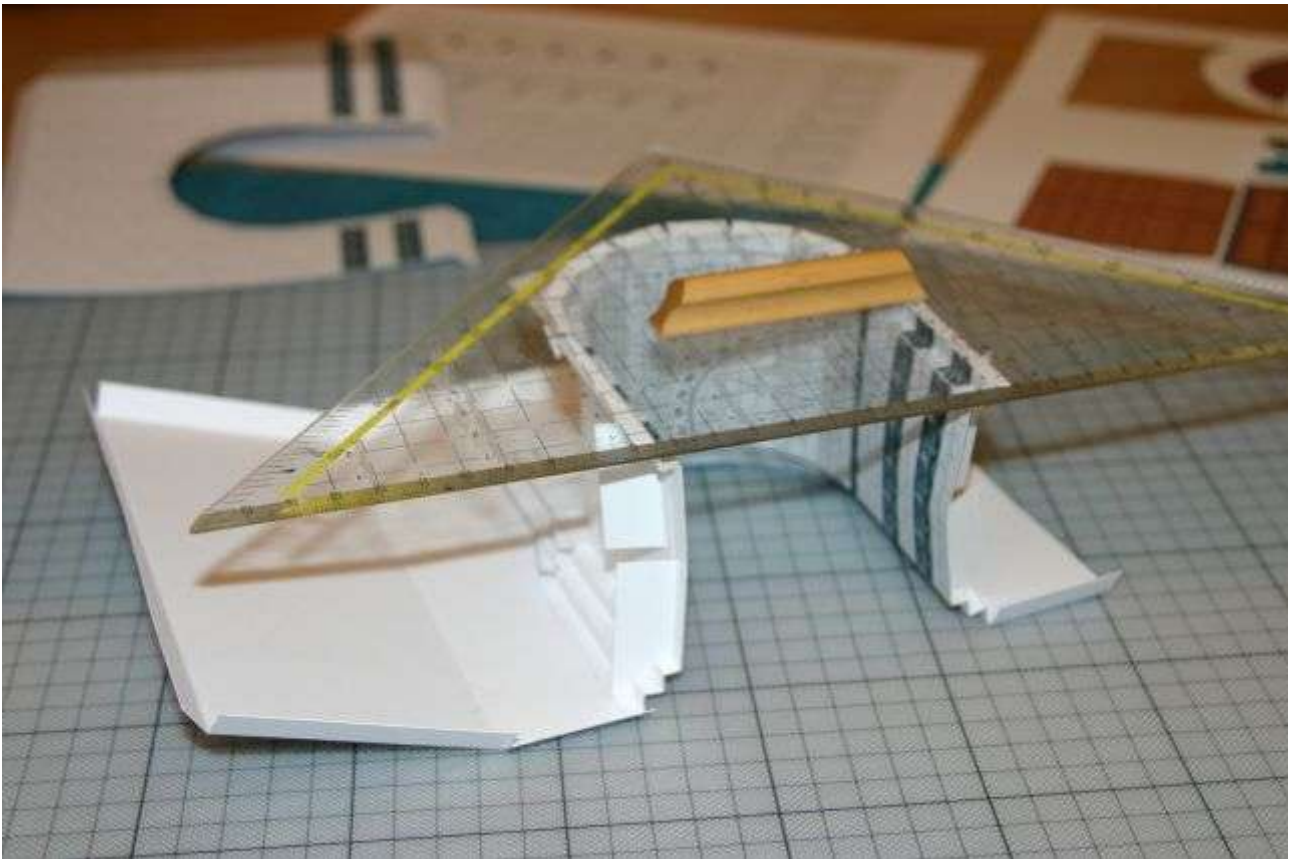

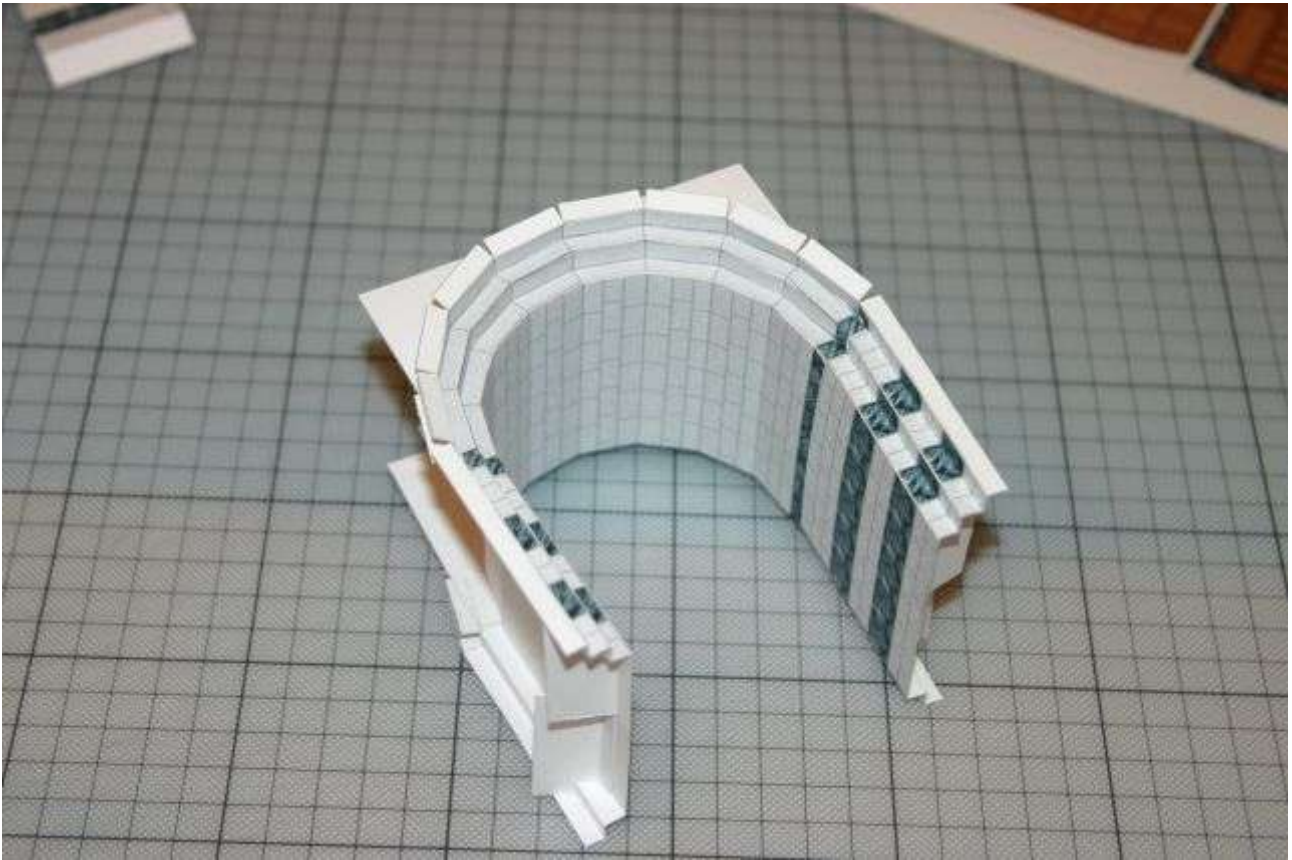

You should are now ready to connect the arc and the inner walls.

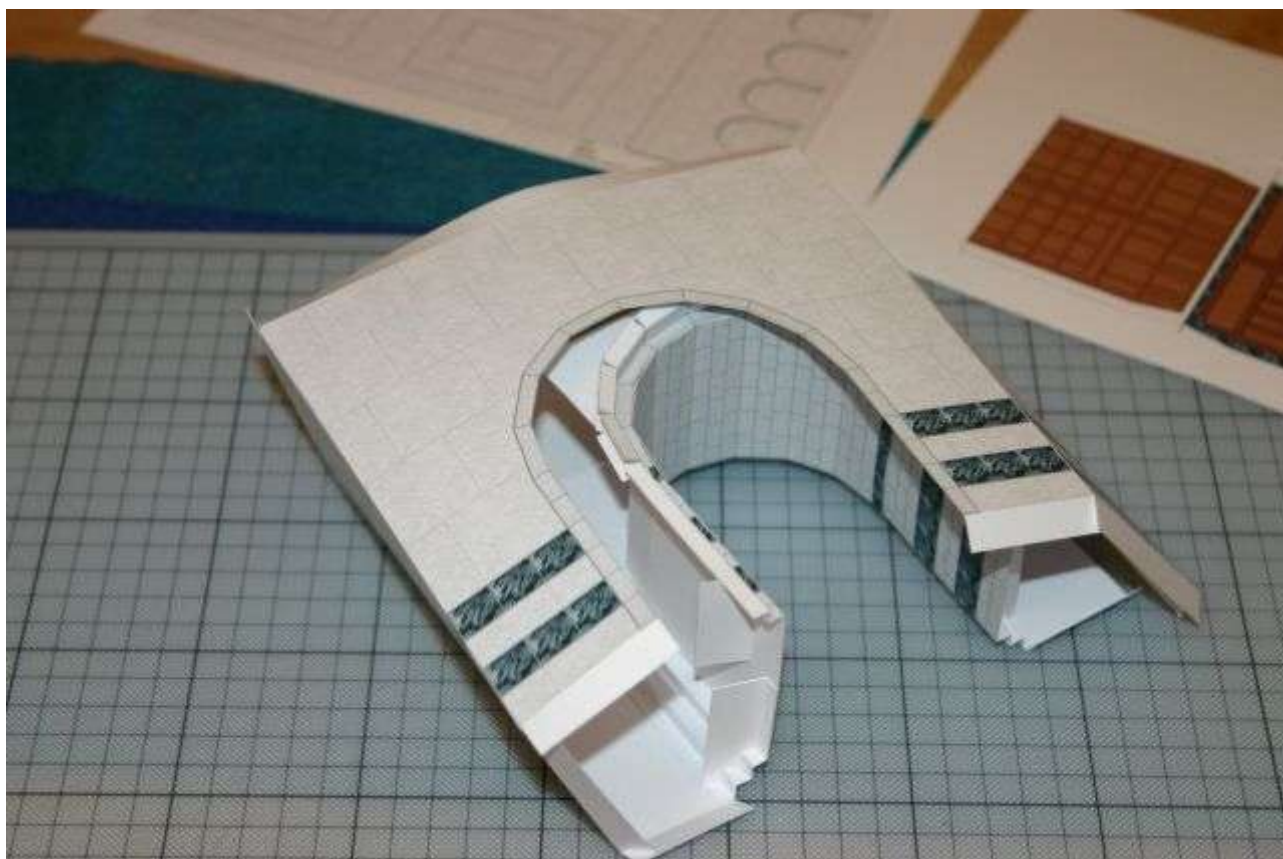

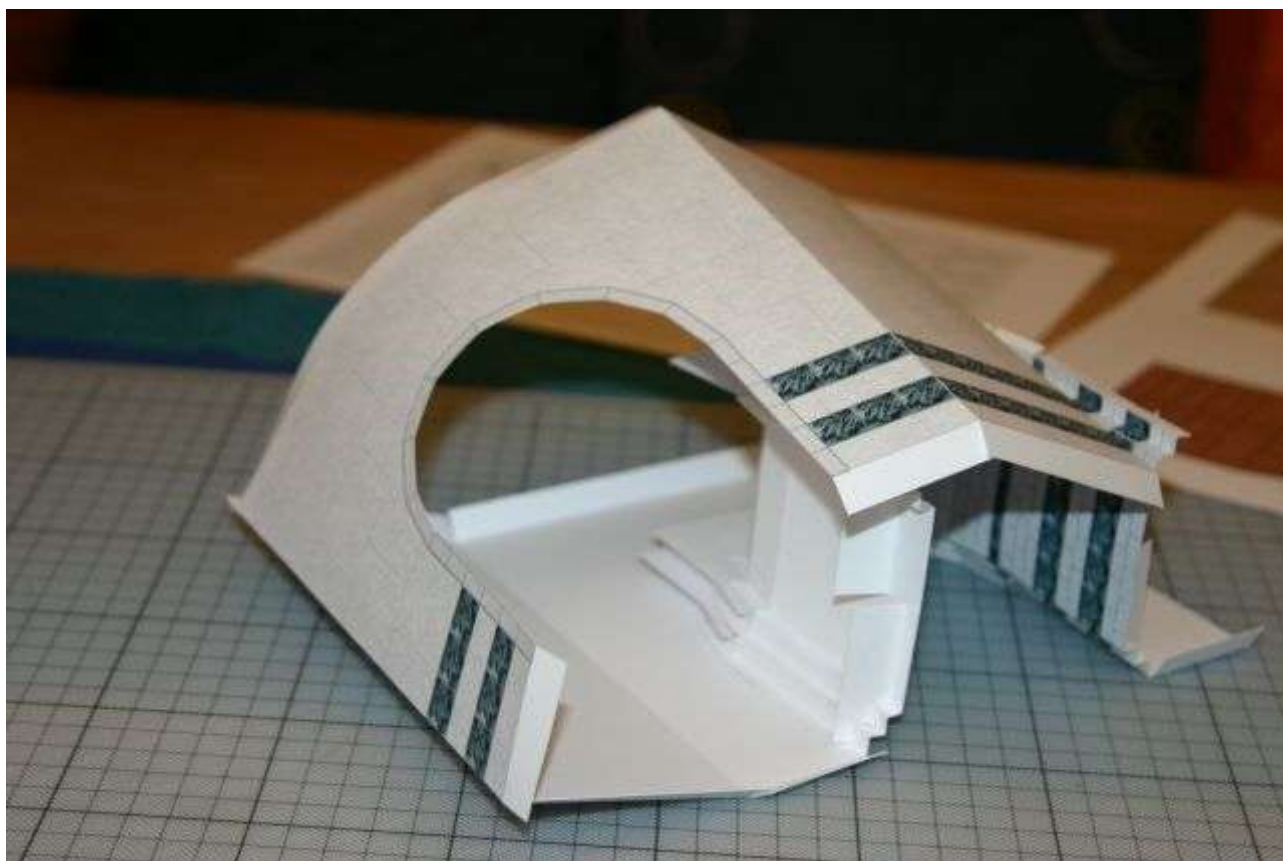

Make sure everything is oriented the right way.

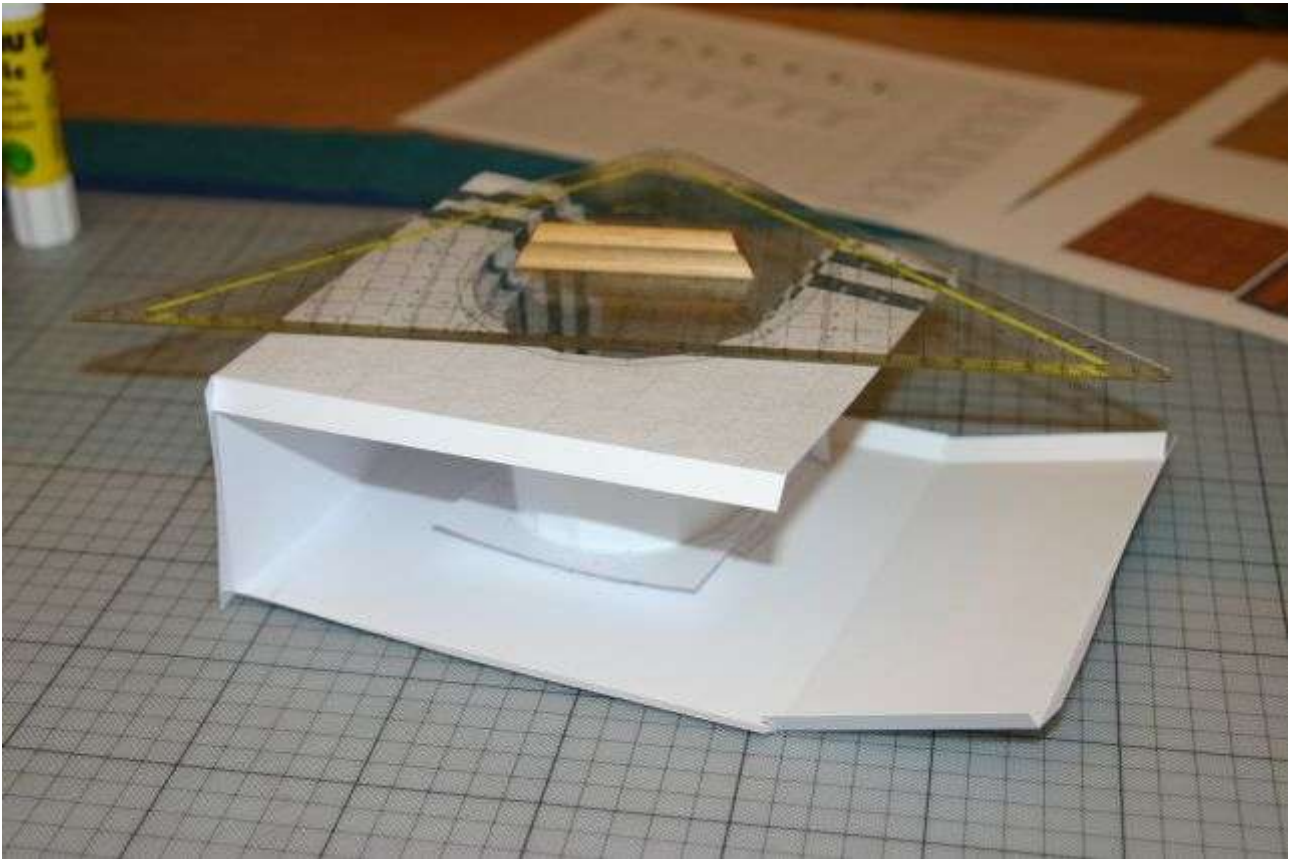

Glue the walls to arc and continue to glue the finished section to the first outer wall part.

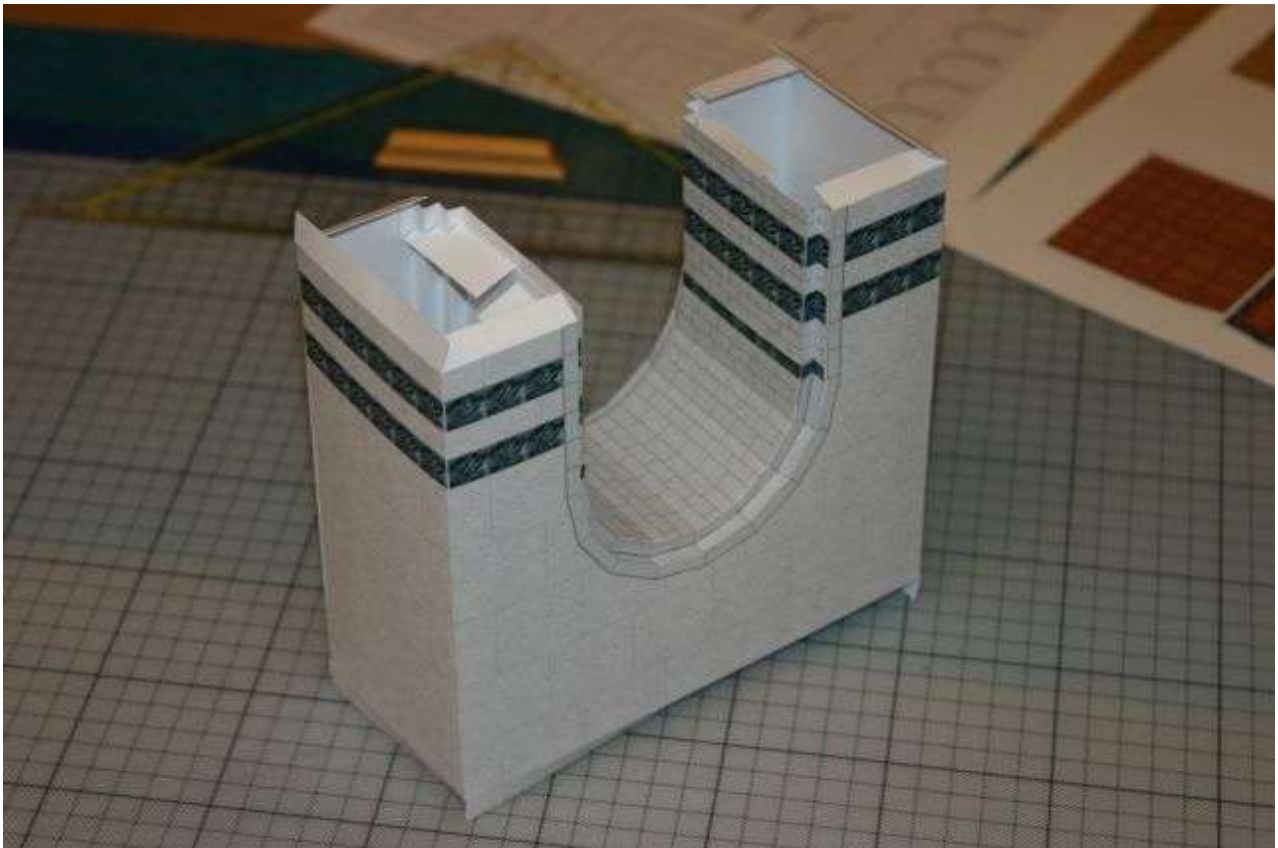

Glue the second wall to the first and let dry before glueing to the back of the arched section.

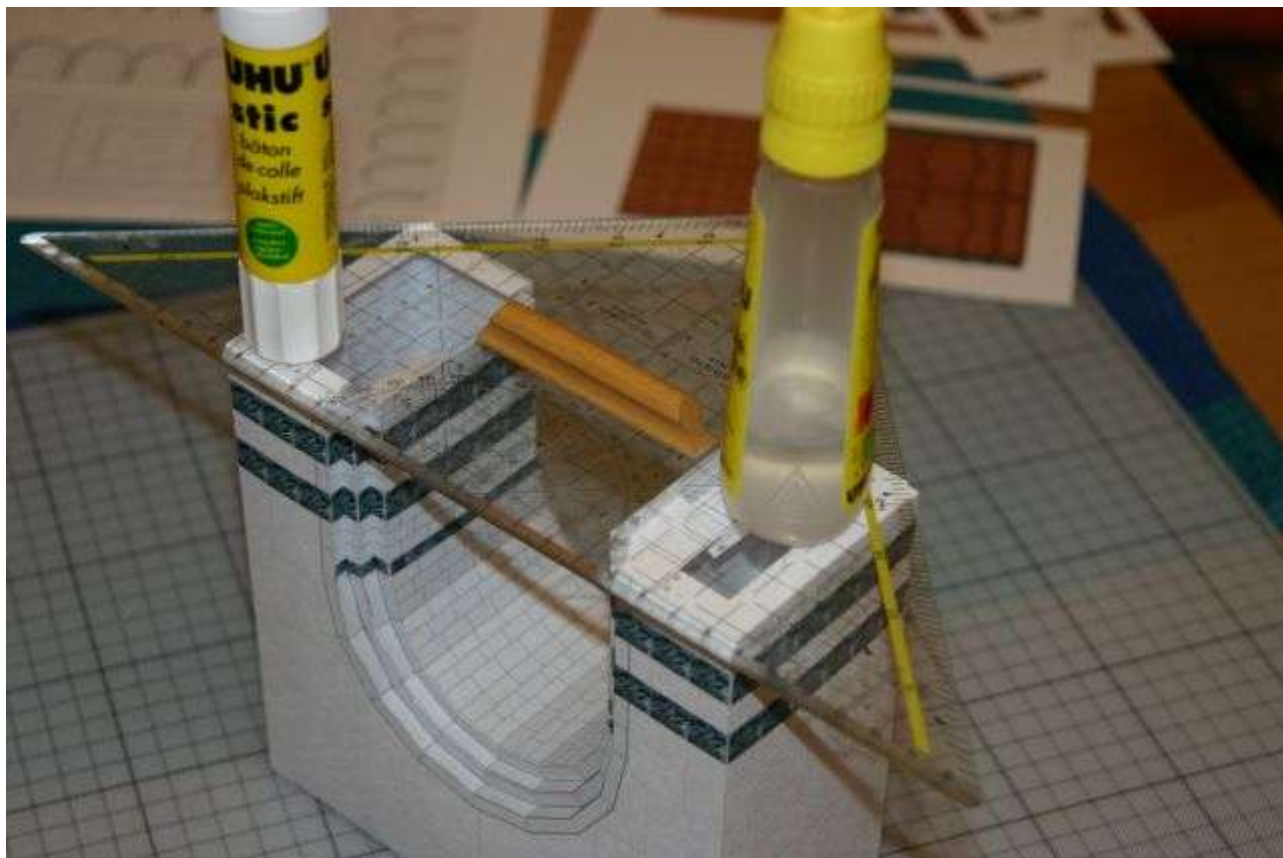

Next glue the other side of the arc to the wall.

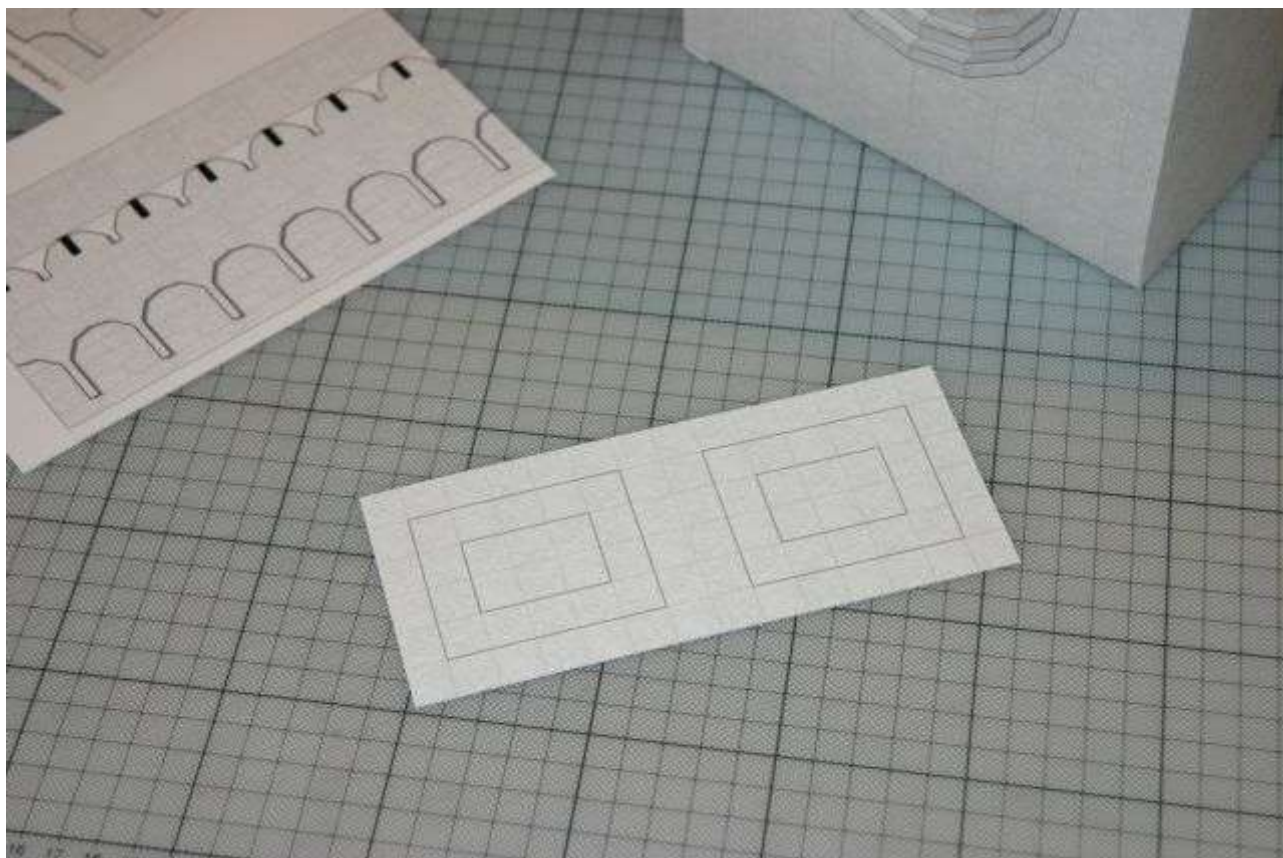

Then close the walls. If you want glue the bottom flaps to stabilize the rectangular form.

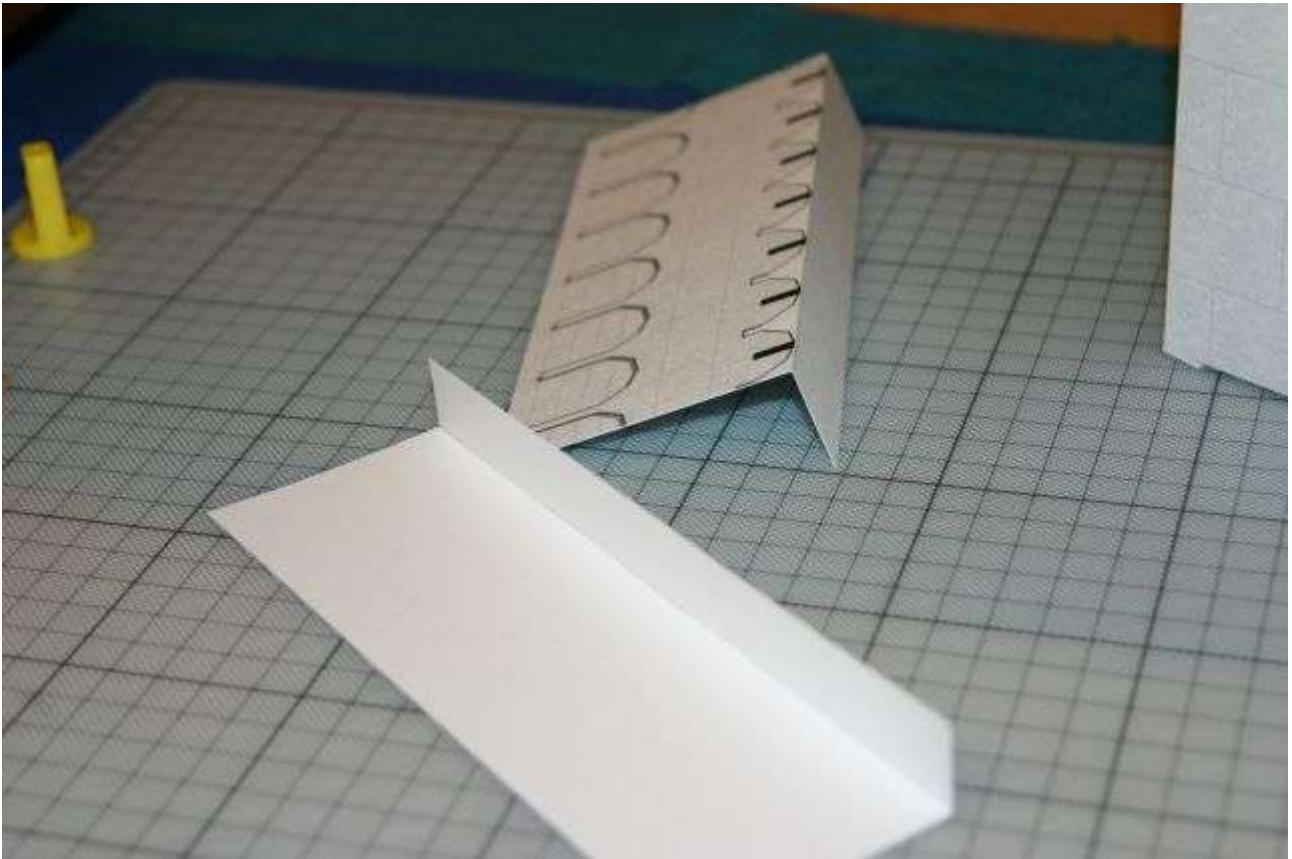

Always allow enough time for the glue to dry!

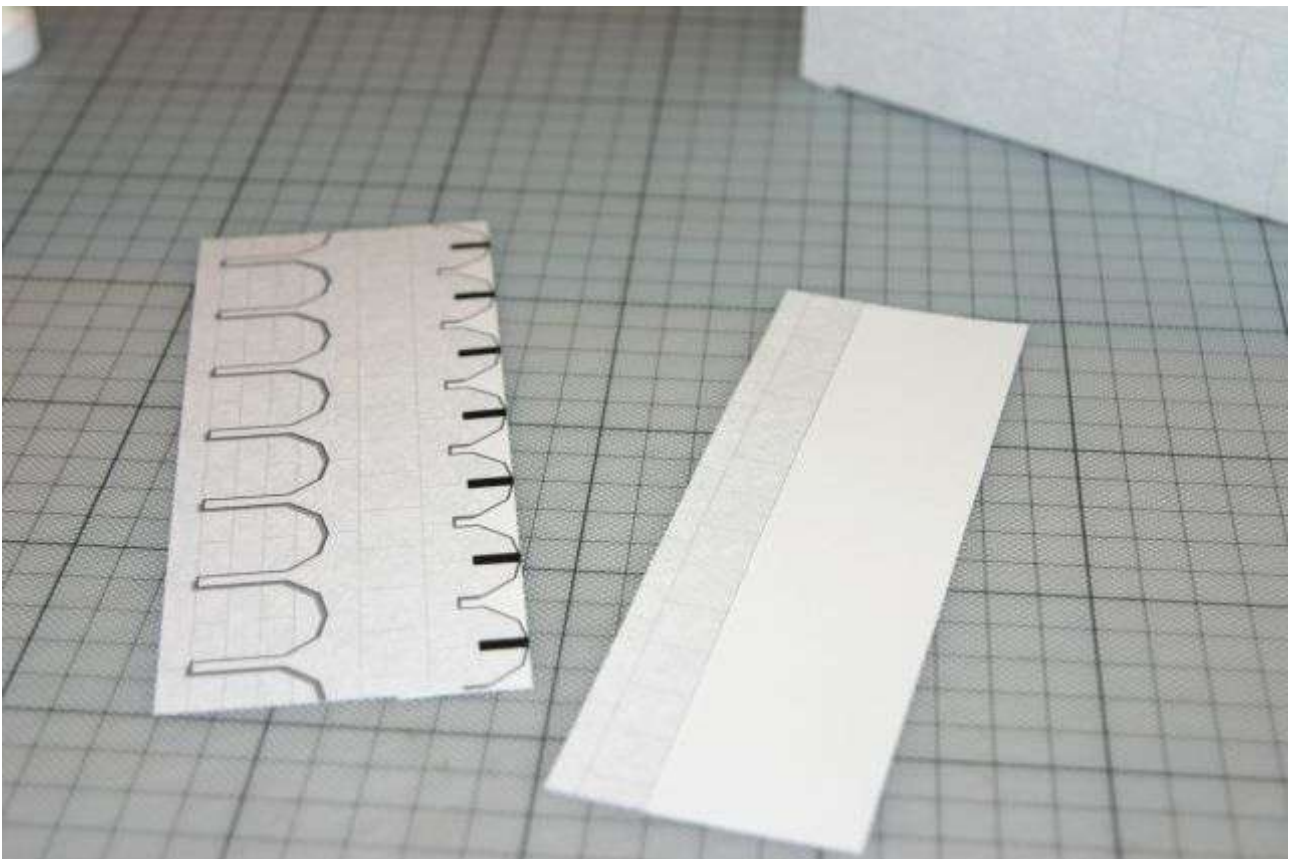

Cut out the top floor.

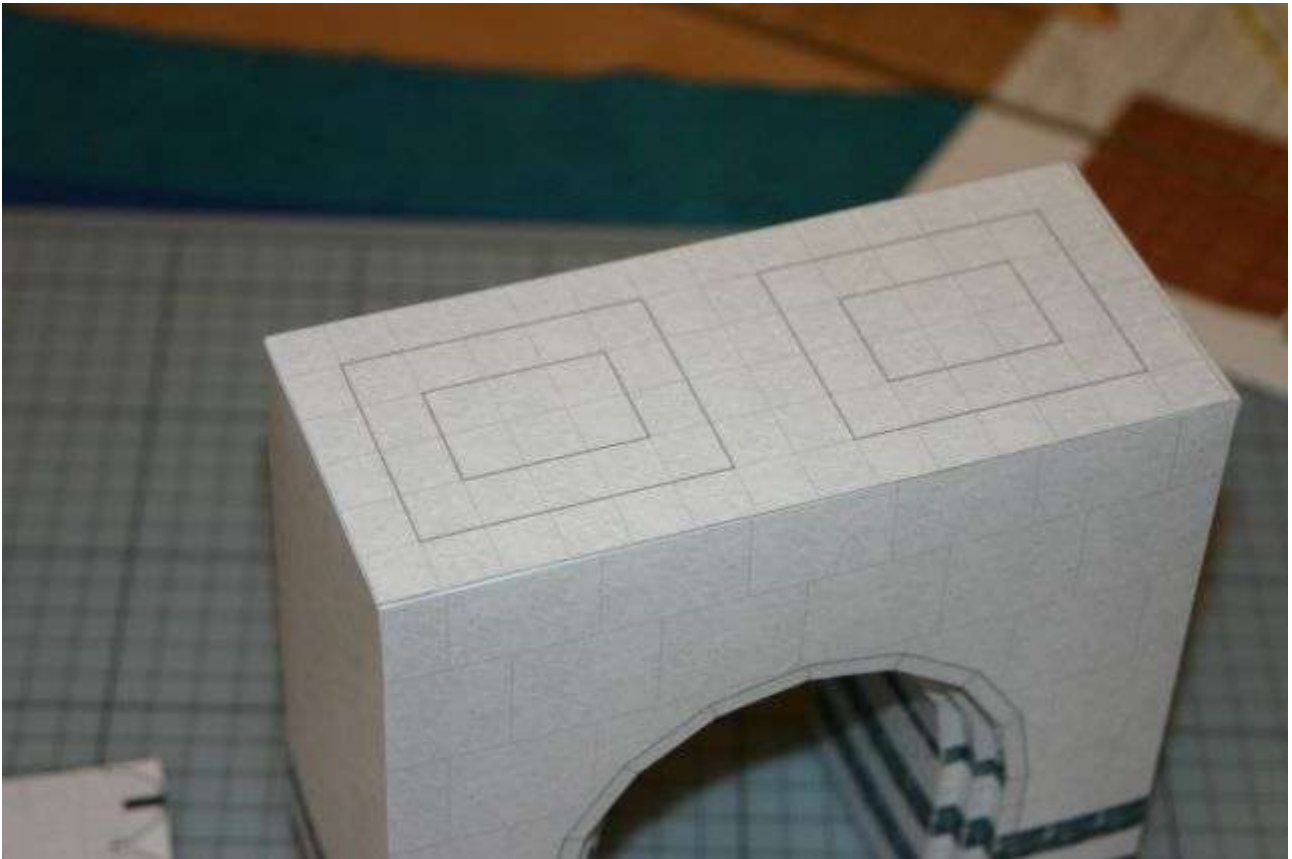

Cut out and score the crenellations.

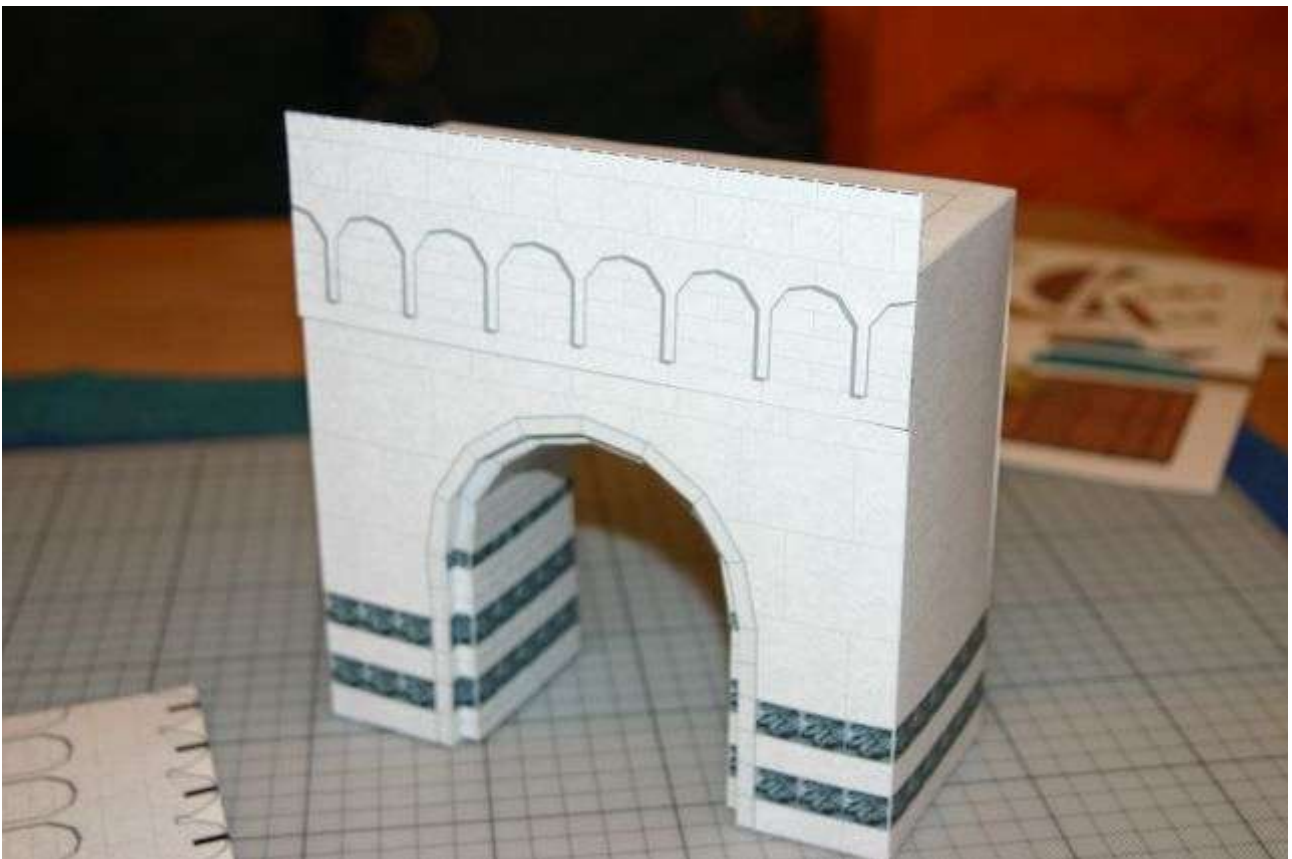

Glue the flaps to the other side.

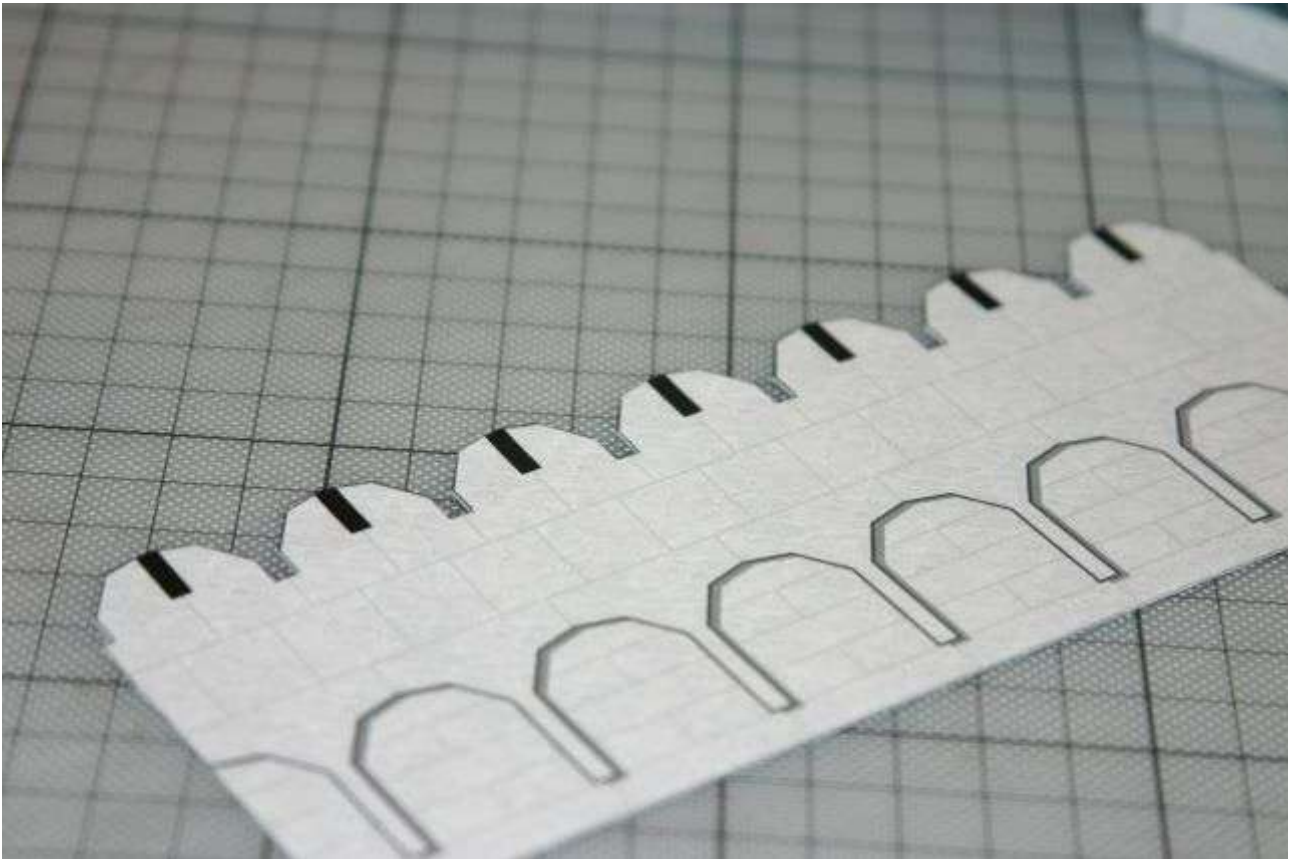

Glue on the top to the wall section.

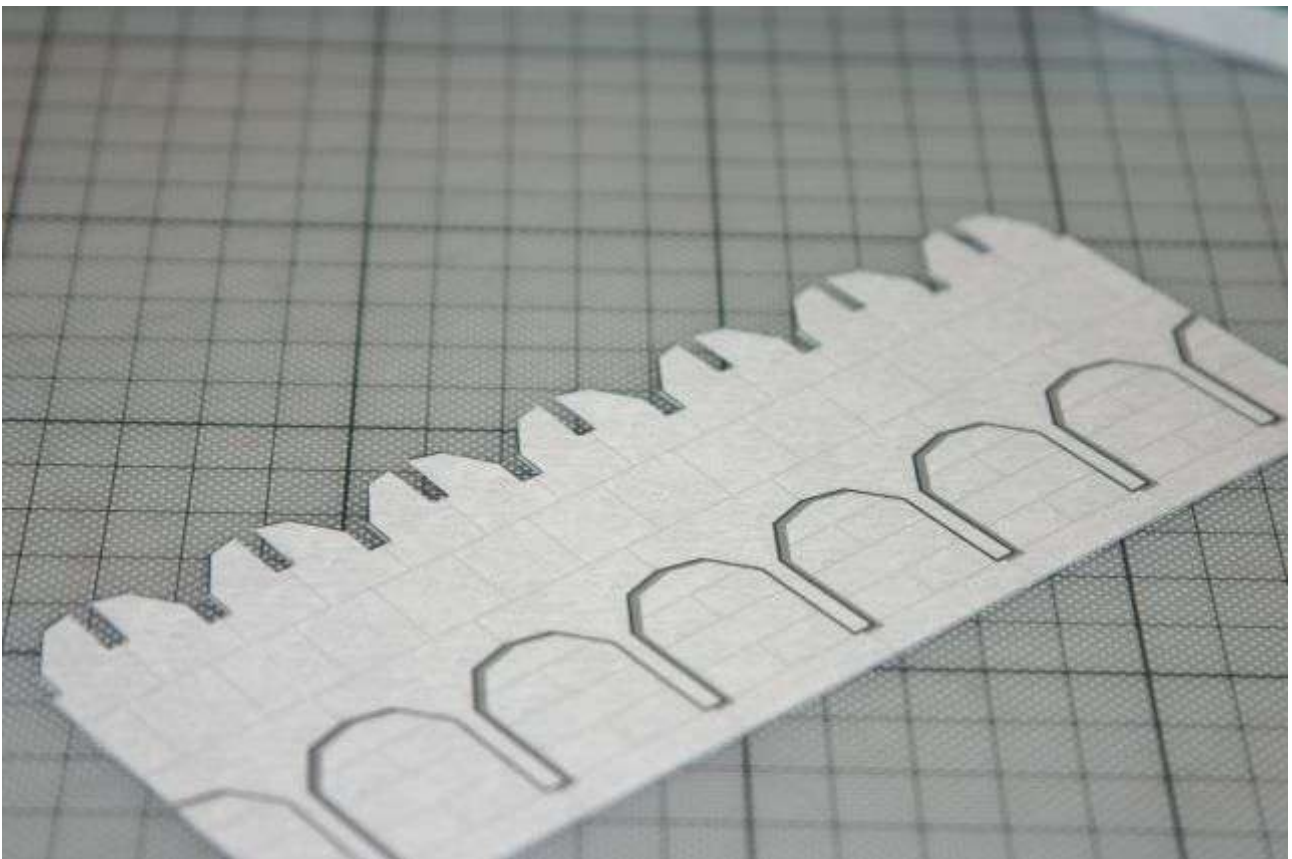

Glue on the back crenellations.

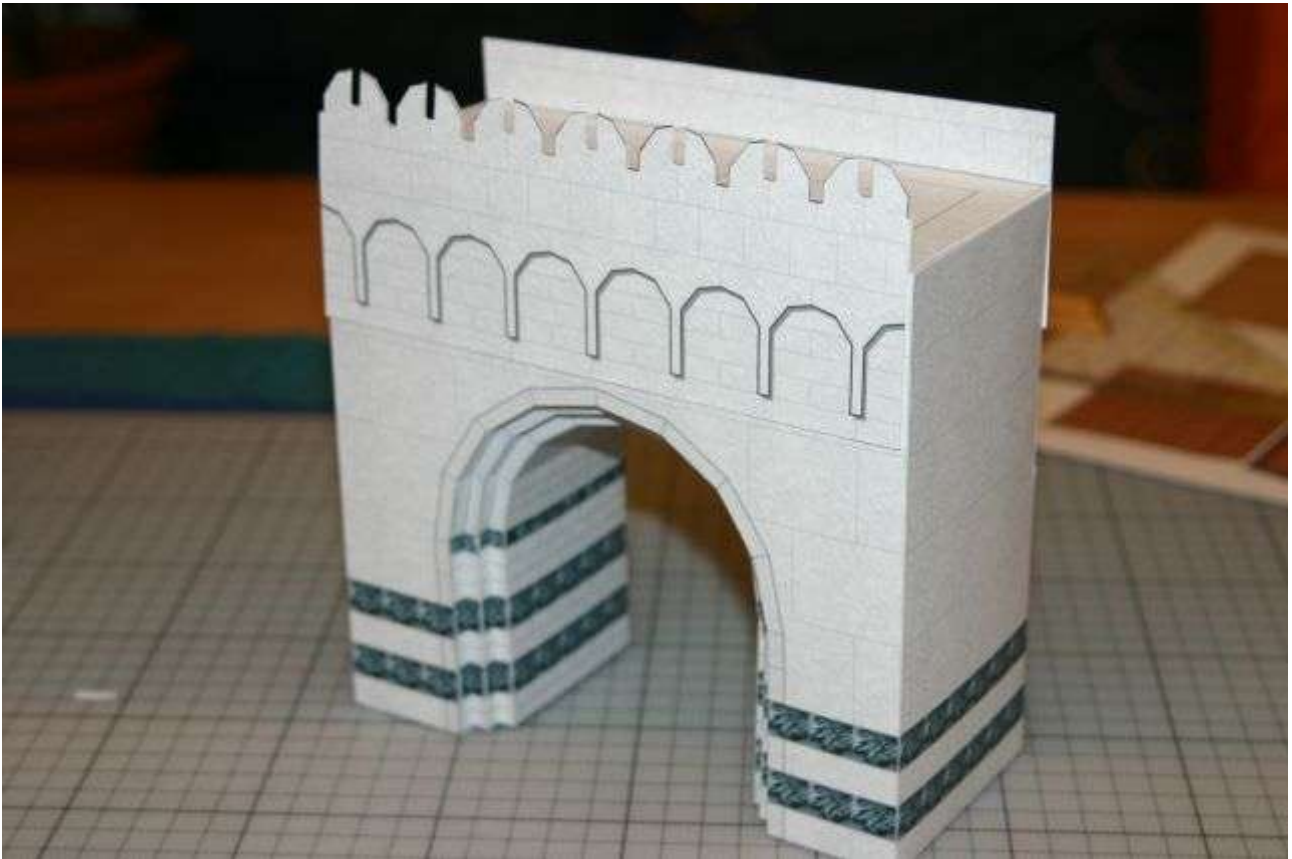

Cut out the details of the front crenellation.

You can leave it at this or go all the way as shown in the next image.

Glue the front crenellation.

TADAAA! The wall is finished.

Next are the doorgates. (to be continued)
