MICROTACTIX

DISCLAIMER

We have made every effort to make sure that all parts fit together properly, but sometimes tolerances are tight and mistakes do happen. Test fit all pieces before applying glue. Some trimming may be required.

Before photocopying or printing these pages on cardstock, you may wish to assemble a test copy on plain paper to better understand the construction. A minimum of 65# cover stock is recommended for constructing the final models. Regular 20 lb. bond paper can be used, but these items were designed for a heavier stock for extra durability and coloring.

Tools Required:

Scalpel or sharp-bladed hobby knife
Metal ruler or straightedge

Cutting surface - a self-healing cutting mat is recommended, but a sheet of corrugated cardboard or even heavy poster board will work as well.

Glue - white glue, glue stick or wax stick. Double sided cellophane tape also works well. Rubber cement can be used, but will sometimes stain the cardstock or discolor colored inks and cause them to run.

A Note About Using White Glue

White glue contains a good deal of water. Too much glue will warp the card stock so that it's almost unusable. Warping may also cause the parts to fit together incorrectly. If you use white glue, put a very thin coat on the glue tabs - the thinner the better. You can use a cotton swab or your finger to spread the glue thin. Remember to keep a damp paper towel handy to remove any excess glue.

PLEASE NOTE:

Each item has been marked with a series of Grey Lines that are an indicator that these lines are Fold or Score lines. All Tabs which are to be glued to hold the structures together are marked with a capital letter (G). Unless otherwise noted, all Glue Tabs fold inwards to the structure.

Cut out and score the 3 pieces on this page as indicated. Start with the recessed doorway section first before assembling any of the other parts. Fold in the top and side panels from the front door panel and fold the tabs out. This will create a 3 sided box with the printed panels on

the inside. Fold down the two triangular tabs and glue to the outside (unprinted) of the side walls. Set aside to dry.

Go to the building section with the roof panel attached. Fold up all four side walls (the ones attached to the roof panel). Glue the connected side wall to the inside of the building side wall. When dry, attach the recessed doorway to the inside of the front of the building over the cut-out section, making sure that the edges match and are flush. When this section is dry, the rest of the building can be assembled. Glue the two sections of the building together by gluing the second section to the first. Glue the long tab along the side to the inside of the panel with the front door on it, connecting the two sections. When dry, apply glue to the upper roof side walls and glue to the inside of the building walls. When you have gone all the way around, fold over the remaining side tab and glue the last wall in place.

Signs have been included for the front and side walls as shown in the photograph or as desired.

The finished building shown with buildings from
