

Vyllage-on-the-Cheep™ COLOR SAMPLER SET

from MicroTactix Games
www.microtactix.com

Welcome to the Vyllage-On-The-Cheep™ Sampler Set. The six pages in this set will construct five full color buildings that will give you just a taste of our new and improved Vyllage-On-The-Cheep™. This set contains over 50 buildings and over 100 stand-up characters from our popular and best selling Vyllage-On-The-Cheep™ Cardstock Building Set. All of the buildings have been improved from our original release, with many completely redesigned, and all rendered in realistic color. The package also includes new doors, windows and signs so a single building can be converted into other structures and businesses to create a huge fantasy gaming environment for hours of enjoyment.

DISCLAIMER

We have made every effort to make sure that all parts fit together properly, but sometimes tolerances are tight and mistakes do happen. Test fit all pieces before applying glue. Some trimming may be required.

Before photocopying or printing these pages on cardstock, you may wish to assemble a test copy on plain paper to better understand the construction. A minimum of 65# cover stock is recommended for constructing the final models. Regular 20 lb. bond paper can be used, but these items were designed for a heavier stock for extra durability and coloring.

Tools Required:

Scalpel or sharp-bladed hobby knife

Metal ruler or straight-edge

Cutting surface - a self-healing cutting mat is recommended, but a sheet of corrugated cardboard or even heavy poster board will work as well.

Glue - white glue, glue stick or wax stick. Double sided cellophane tape also works well. Rubber cement can be used, but will sometimes stain the cardstock or make it more difficult to color.

A Note About Using White Glue

White glue contains a good deal of water. Too much glue will warp the card stock so that it's almost unusable. Warping may also cause the parts to fit together incorrectly. If you use white glue, put a very thin coat on the glue tabs - the thinner the better. You can use a cotton swab or your finger to spread the glue thin. Remember to keep a damp paper towel handy to remove any excess glue.

PLEASE NOTE:

Each item has been marked with a series of Grey Lines that are an indicator that these lines are Fold or Score lines. All Tabs which are to be glued to hold the structures together are marked with a capital letter (G). Unless otherwise noted, all Glue Tabs fold inwards to the structure.

SOME GENERAL CONSTRUCTION NOTES:

Most of the pieces in this set will construct using the box method. Cut out and score the building as indicated and fold into a box shape and glue the last tab to the inside to close. If the building sides are in two pieces, glue the two together to form one long strip before folding into a box. To attach a roof, fold down the tabs along the roof peaks of a building, apply glue, and set the roof in place. Some roofs are two pieces. Glue the two sides together using the tab on the one side. Be sure that the roof tile pattern is running down the roof from the center. Other pieces in this set will assemble as stand-ups. To construct, fold the piece into a triangular shape and glue one of the bottom "feet" on top of the other. Instructions for other pieces will be given in the instructions for that particular building.

THE VYLLAGE CRYER

Cut out and score the building section as indicated. Start with the front panel (the one with the door on it) and fold to match the angles on the left side wall. Glue the tabs to the inside. When dry, repeat for the left side wall. When this section is dry, fold over the rear wall and glue the tab to the inside. To attach the roof, fold down all tabs along the top of the building, apply glue and attach the roof. The long narrow sign can be attached to the area above the door while the bulletin board can be attached to any wall as desired. Fold the large, free-standing board into a triangle shape and glue one of the bottom panels on top of the other. The figure of the Vyllage Cryer is assembled the same

way. For a final touch, the sign (with the crossed quill pens and bell) is folded into a triangle with both of the printed sides to the outside. It can then be glued over the window on the building front as shown in the photograph below.

The finished Vyllage Cryer.

Before mass communication, the Vyllage Cryer was the only way to get the news about. Handbills and broadsides were posted outside the shop or on the building sides. These shops also served as scribes for legal or official documents.

OLD JOE'S BOTTLE & BONE SHOPPE

This building will construct exactly like the Vyllage Cryer, given above. It has several additional windows and an additional chimney. To construct the chimney, fold into a box, fold down the tabs along the top and glue the top panel in place. The bottom tabs are then folded in and the chimney is then glued in place along the center peak of the roof.

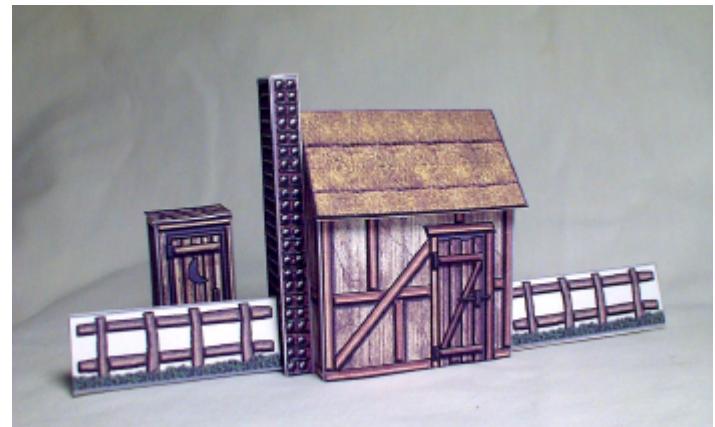

The finished Bone & Bottle Shoppe.

Old Joe is the owner and operator, buying bones, rags, rubbish and refuse from the common folk. Pando and Larr are his twin grandsons. They're on hand in case any of Old Joe's customers get "rowdy".

THE SHACK

The main building will construct as a simple box. Build the house first and then the chimney. To construct the chimney, fold in the side panels and fold the tabs on these panels to the back. Fold down the two triangular tabs at the top and glue the top of the chimney in place. Fold down the back panel and glue to the long tabs on the side panels. When dry, glue in place on the side of the house. Place the roof on the building in the using the method described above. The outhouse is a simple box with a flat roof. The fences will construct as stand-ups.

The finished Shack.

A typical dwelling of the lower classes that populate the Vyllage. You'll find several scattered around town.

THE OLD VYLLAGE TAVERN

Glue the two sides of the building together and construct as a box. The roof is in two sections and must be assembled before attaching to the house. The sign is optional and can be placed over the front door.

The finished Old Vyllage Tavern.

A small, but well respected establishment in the Vyllage. For those who wouldn't be caught dead at the Orc & Cleaver.

THE ODD LITTLE HOUSE

This building was not designed to be anything in particular, but it does contain many elements that are in the full *Vyllage-On-The-Cheep™* CD. Start with the roof on Page One. After cutting out and scoring the main roof section and the roof skirt, begin by gluing the skirt to the tabs on the bottom of the main roof section. Work all the way around until coming to the last panel. Glue the tab on the main roof section to the inside to close and do the same with the tab on the roof skirt. You should end up with a roof looking like the one in the photograph. Cut out the four dormer sections and the four dormer roofs on Page Two. Fold in the sides of the dormer and fold all the tabs to the inside. The dormers can be attached to the main roof so that they are centered and the bottom of the dormer lines up with where the main roof and skirt meet. When dry, attach the roof by applying glue to the tabs along the dormer top and the two tabs at the

inside. Match up the edges of the doorway and the cut-out so they are level and none of the glue tab shows around the edges. When dry, form the building into a box as normal. When dry, attach the roof section by applying glue on the tabs along the tops of the building walls and press into place. To construct the stairs (on Page One), fold in the two sides and fold the stair panels to match the angles, gluing all tabs to the inside. Glue one side in place at a time for ease of construction. The extra windows on Page One can be placed around the building as desired.

The finished building.

What is it? A wizard's house, or an armory. Maybe a garrison for the town guard. With additional signs and windows from the *Vyllage* CD, it can become whatever you might need for a night of gaming and adventure.

rear of the dormer roof. These tabs will attach directly to the main roof section. Repeat for all four sides.

Cut out and connect the two sides of the building body, but do not assemble into a box just yet. Cut out the indicated section on the building front. Cut out and score the recessed doorway also located on Page Two. Fold all four sides of the doorway up and all the glue tabs around the edges to the out. Fold the triangular glue tabs at the top and bottom of the doorway and glue to the outside of the side walls. This will create a box with all the printed sides on the inside. When dry, apply glue to the outside tabs and attach the doorway over the cut-out section from the
