

WATER TROUGH ASSEMBLY

1. Cut out water trough and lay flat (art side down); score fold lines lightly with sharp knife on art side.
2. Fold up ends
- 3/4. Fold up sides
5. Place insert (art side up) into water trough; place so insert top is level with top of water trough (ie the blue art represents water and should only be about halfway down inside water trough to simulate the water level).

NOTE: Insert is option, but recommended. This model works best when light card stock is used for its construction
