# :BARRICADE MODULES _

REZOLUTION
## :>a dark tomorrow_

Cut, score and fold over the barricade as shown.

Apply a bead of glue to the reverse side of the barricade as shown inset.

Burnish (rub) the barricade removing air bubbles and ensuring even glue distribution.

Lightly score the front side of the barricade where marked.

Fold over the side walls as shown.

Carefully cut away the remaining whitespace from the barricade as shown.

OPTIONAL STEP:

If you are obsessed with the "little details" like me you'll want to take this opportunity to cut open the side killholes on your barricade.

Finish your model off by edging any visible white cut and score lines with a black or grey felt marker.

There little barricades take very little time to create and make for great cover in the city or on the battlefield.
