

Constructing a Drop Pod - Style 04

How to build a Drop Pod

What you will need: Glue Stick (Pritt) and a pair of scissors

1. You will need to print out 3 pages to make one pod. (You get one complete section spare)
2. Cut out all the pieces.
3. Fold A along the crease lines to form a:

4. Fold D along the crease lines.
5. Fold all of D's tabs down except the back tab which needs to be folded up
6. Insert D's up tab between A's sections so that the up tab can be glued to the back of A's centre piece.
7. Glue D's other tabs to A's side sections so that D forms the base of the transport compartment and the pods base.
8. Glue the A's together to form the main pod's shape.
9. Fold B and C along the crease lines.
10. Glue C to the inside of B to form the doors interior.
11. Line up the door mechanism of B with those of D and glue the door in place.
12. Bend the door so that there is an approximate fit
13. Fold the Flaps around E down
14. Glue E into the main body's centre cavity to fill the hole and create the engine compartment.

There you have it a cheap and cheerful Space Marine Drop Pod.

Constructing the Dreadnought Drop Pod

Use the above as a reference for the parts of the drop pods.

A - Main body	F - Central Floor Panel
B - Door outside	G1 - Base Left
C - Door inside	G2 - Base Central
D - Engine housing	G3 - Base Right
E - Exhaust Fan	H - Pod Floor

What you will need: Glue Stick (Pritt) and a pair of scissors.

1. You will need to print out 3 pages to make one pod.
2. Cut out all the pieces.
3. Fold the pieces along the fold lines to form the relevant shapes.

To make the base

1. Attach G1 to the left part of the pods base following the shape.
2. Attach G3 to the right part of the pods base following the shape.
3. Fix G2 into the centre portion of the base.
4. Glue H into place attaching it to the base sections and main body.

To create the engine housing

1. Attach D to the main body to form a parallelogram when viewed from above.

To make the doors

2. Fold and glue B into it's required shape.
3. Fold and glue C into it's required shape and fit it into B.

To make the pod

1. Glue each of the three body sections (A) together.
2. Glue F into place coving the hole in the centre.
3. Insert E into the engine housing and glue in place.
4. Attach the doors to the base (G2).

The Dreadnought Drop Pod should now be complete.
