+8	400%

Less than -5 is -5.
More than +8 is +8.
DM + Broker/2
(to maximum +4).

For example,

A Free Trader has bought for speculation a cargo on Efate to sell on Alell. The cargo ID from Efate is D Hi In Cr 2,300 (=Cr3,000 - 1,000 - 1,000 plus TL Effect = 13 x 100 = 1,300 = Cr2,300).

He carries it to Alell B46789C-A Ri. It is priced at (Cr5,000 + [In> Ri] = +1,000 = 6,000) plus TL Effect (=13 - 10 = 3 x 10% x 6,000 = +1,800) = Cr7,800. These goods have a Price of Cr7,800.

The trader offers them on the market using the Actual Value Table and rolls 0 = 100%. The goods sell for Cr7,800 and a profit of Cr5,500 per ton.

The Free Trader buys cargo on Alell for sale on Uakye. The cargo ID from Alell is A Ri Cr2,300 (=Cr3,000 + 1,000 plus TL Effect = 10 x 100 = 1,000 = Cr5,000).

He carries it to Uakye B439598-D Ni. It is priced at (Cr5,000) plus TL Effect (=10 - 13 = -3 x 10% x 6,000 = -1,800) = Cr4,200. These goods have a Price of Cr4,200.

The trader offers them on the market using the Actual Value Table. He rolls the first die (= +1) and sees that the best value he can get for the goods is 100%. So he cancels the transaction and moves on to the next world.

He carries it to Efate A646930-D Hi In. They are priced at (Cr5,000 + [Ri>Hi, Ri>In = +2,000 = 7,000) plus TL Effect (=10 - 13 = -3 x 10% x 7,000 = -2,100) = Cr4,900. These goods have a Price of Cr4,900.

The trader offers them on the market using the Actual Value Table. This time he finds a Broker-4 to help him. He rolls on the Actual Value Table = +3 - 1 + 2 = +4. The Selling price is 150% of the Price = Cr7,350 (minus 20% commission = 1,470 =) Cr5,880. He makes a profit of Cr880 per ton.
