

Drive Potential

Drive Potential determines the performance of drives, and is dependent on an interaction between the drive and the hull.

DRIVE POTENTIAL-1

Determine Drive Potential (in table body) for a Drive (left column) installed in a Hull (top row).

no= not possible. Grey 9= Drive is possible with but smaller ones are more efficient.

For example, Jump Drive-A in Hull-A produces a Jump Drive Potential= 2. The Jump Drive can achieve Jump-2. Maneuver Drive-H in Hull-E produces Maneuver Drive Potential = 3. The Maneuver Drive can achieve 3 G acceleration.

DRIVE POTENTIAL-2

Determine the Drive (in table body) for a specific Potential (left column) for a Hull (top row).

no= not possible.

For example, achieving Jump-6 in a 1000-ton Hull-K requires Jump-Drive-Z. The maximum Potential available for a Hull-R is achieved with a Z2 Drive in row 8 = Potential 8.

Regardless of the Potential on these tables, the actual output of a drive is restricted by its construction Tech Level.
