

UM Stepladders

Modeler: Bob Cooper (Andorax)

Sets: Any modern

Set Items Needed: None (standalone model)

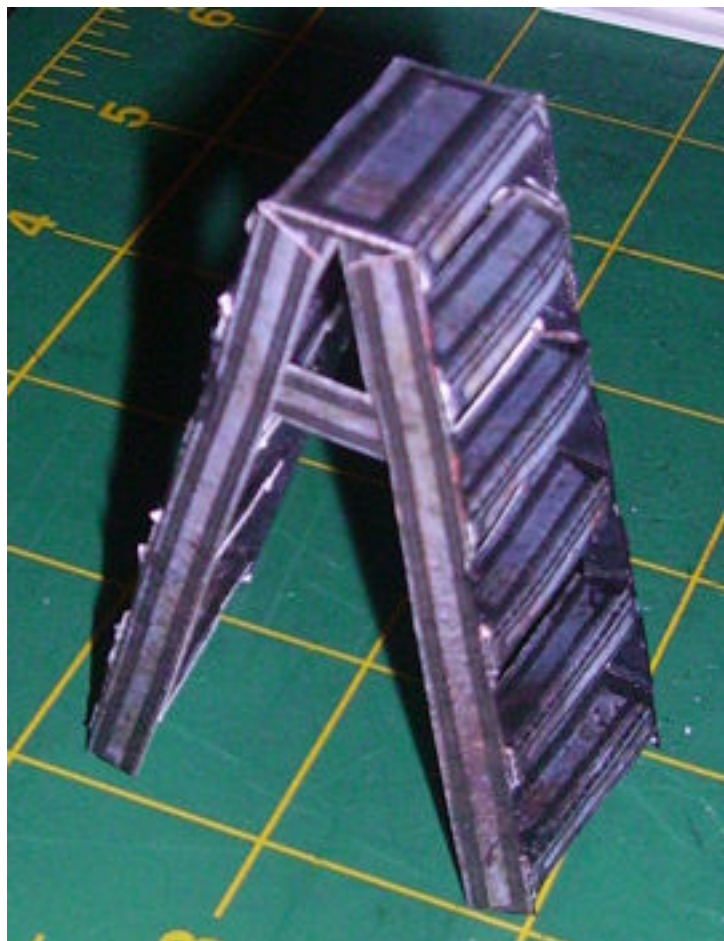

A simple, straightforward stepladder. Could fit into a wide variety of different settings and situations.

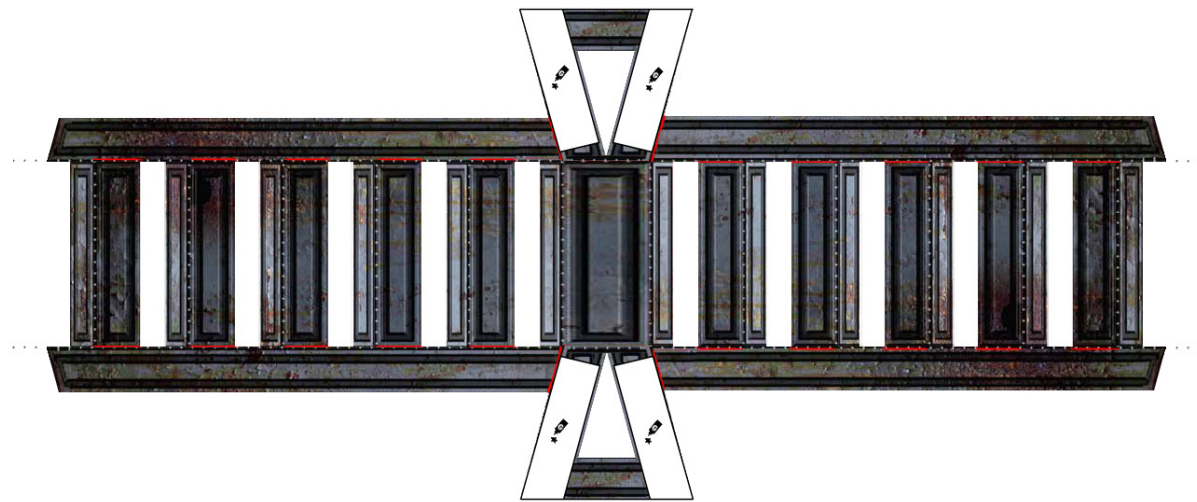

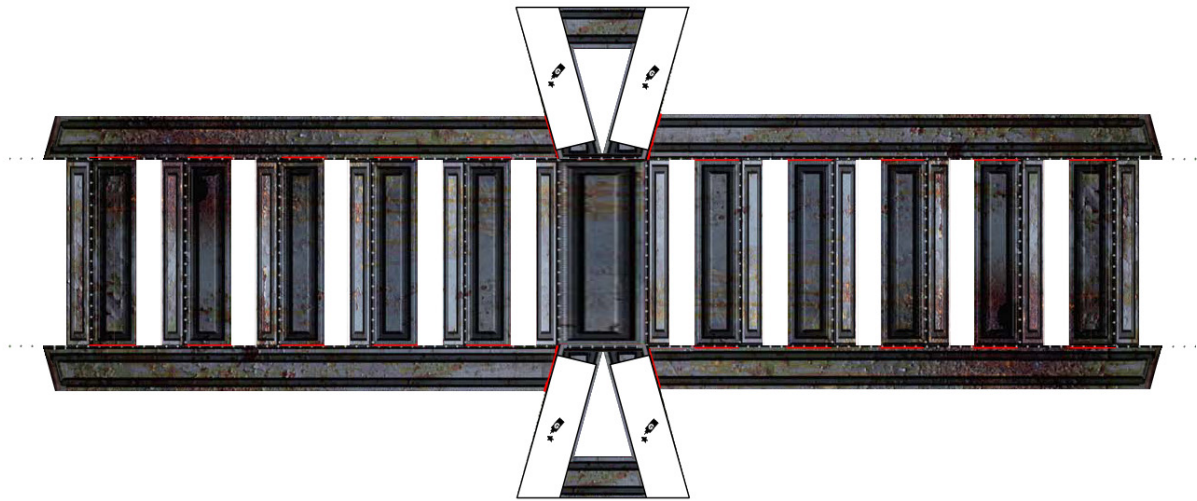

Before folding the model together, you might want to edge the back of the legs of the ladder in black...it looks a bit better that way.

Cut (note the red lines, those are cut through as well) and score as marked. Take care NOT to cut off the faces of the steps, as they're the only thing holding the model together.

The model has some build similarities to the Platform Command: Operation Nightwatch ladder, and its textures come from there. Fold the legs over the supports (the a-shaped bit of framework) and glue down solidly, one side at a time. Then fold out each of the steps until flat. Edge in black.

The stepladder should be able to hold plastic minis who's bases will fit between the sides of the ladder, and is reasonably sturdy.
