

BATTLELANDS 15™ NORMANDY: 1944

VILLAGE BUILDING AND RUINS

DISCLAIMER

The designer has made every effort to make sure that all parts fit together properly, but at 15mm scale tolerances are tight and mistakes do happen. Pieces may fit together differently than designed depending on the weight of cardstock being used and the particular tolerances of your printer. It is recommended that you test fit all pieces before applying glue. Some trimming and other adjustments may be required during final assembly.

IMPORTANT! PLEASE NOTE:

These models have been marked with a series of grey lines to indicate where to fold. In most cases the grey line will appear at the edges of the building pieces and not on the buildings themselves. It is strongly recommended that all scores or fold lines be made before the piece is cut from the page. In most every case the grey line will appear at the top and bottom of a line that needs to be scored. Line up your ruler along these grey lines so it is even and score across the body of the section you are intending to construct. In some cases, such as the roof lines and peaks along the building tops, the grey line will appear when it is hidden by another adjoining piece. For the majority of these pieces the areas needed to be folded will be between walls or across wall faces. Some of the pieces in this set may have one half of the glue tabs textured. This was done to hide any of the white of the paper that might show on the tab side when folding and gluing in place.

These models were designed to be printed on 110# cardstock (available at your local office supply store), but a lighter cardstock will work just as well. If your printer cannot print on cardstock of any weight, the pieces can be printed out on plain white paper (20 lb. bond, uncoated) and glued to a piece of cardstock or suitable heavy paper for construction. It is recommended, however, that the bases be glued to a heavier cardstock to help support the buildings and add durability to the finished models. Bases can be glued to heavy chipboard, foam board, illustration board or any other type of heavy material as desired.

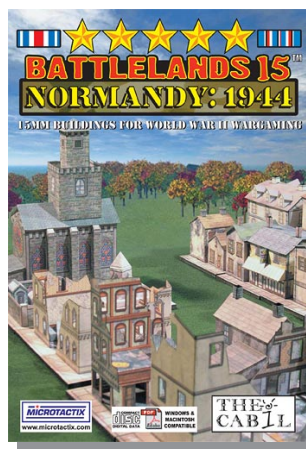

To construct the house, score and cut out all the pieces on this page. Glue the 2 sections of the building walls together. Fold the model into a box shape and glue the tab to the inside to close. Set this section aside to dry. Fold down all 4 panels of the roof and fold under the glue tab. Glue the tab to the underside of the opposing roof panel. When dry, attach the roof by applying glue to the tabs along the top of the building and setting the roof in place. Fold the chimneys into a box shape and glue the tab to the inside. When dry, fold up the triangular tabs along the bottom edges and glue to the roof as shown in the photograph or as desired.

The sign and advertising posters are optional and can be placed on the building as desired.

To construct the ruins, start by making all the scores before cutting out. Fold the inside and outside walls along the horizontal score line and glue the 2 panels together to form a 2 sided section. Set this piece aside to dry before going any farther. When completely dry, make the single vertical fold near the center to form the piece into a corner. Carefully cut out the white space in the centers of the window frames and then cut away all remaining white space around the outside edges of the building walls. Fold the walls back into a corner and fold the glue tabs up so they are on the inside. After cutting out the base and gluing it to a heavier piece of cardstock, fit the walls into the corner at the edges of the sidewalk and glue in place. When dry, cut out the floor tile (the one with all the rubble) and glue in place on the inside of the building over the glue tabs. The glue tabs along the bottom edge of the wall have had a texture added in case there is any misalignment along the edges where the floor tile and the bottom of the building walls meet.

To construct the cement pylon, fold into a long box shape and glue the tab to the inside. Fold down the triangular tabs, apply glue and fold the top panel down into place. As with the building above, the posters can be placed as desired.
