

Blue Planet

Instructions

- 1.Body.** Score along black lines. Glue sides of body to bottom first, to ensure alignment. Glue remaining tabs to form front of body.
- 2.Seating and Fan Assembly.** This section is essentially a glorified box. Score all panel lines, making sure that appropriate lines have been scored on the back. It is easiest to work from the front of the model (starting with the smaller grey section). Glue one side first, and then the other to ensure correct alignment. Complete section by gluing the end (louvered fan section) into place.
- 3.Windshield and Dashboard.** Score **Windshield and Dashboard** on reverse side to halfway point of windshield. Score outside of windshield on printed side. Fold and glue the windshield. Fold entire assembly to conform to the curve at the front of the **Body Top** panel.
- 4.Body Assembly.** Apply glue to the bottom of the **Seating and Fan Assembly**. Slide into the **Body** to the point marked "Align here". Fold the **Interior Panels** down to form the passenger compartment.
- Fold down the grey tabs at the front of **Body Top**. Glue **Windshield and Dashboard** to grey tabs.
- Fold **Spoiler** and glue to the angled sides of the **Body Top** panel.
